1. WARNINGS AND PRECAUTIONS FOR SAFETY

Please observe the following safety precautions in order to use safely and correctly the refrigerator and to prevent accident and danger during repair.

1. Be care of an electric shock. Disconnect power cord from wall outlet and wait for more than three minutes before replacing PCB parts.
Shut off the power whenever replacing and repairing electric components.
2. When connecting power cord, please wait for more than five minutes after power cord was disconnected from the wall outlet.
3. Please check if the power plug is pressed down by the refrigerator against the wall.
If the power plug was damaged, it may cause fire or electric shock.
4. If the wall outlet is over loaded, it may cause fire.
Please use its own individual electrical outlet for the refrigerator.
5. Please make sure the outlet is properly earthed, particularly in wet or damp area.
6. Use standard electrical components when replacing them.
7. Make sure the hook is correctly engaged.
Remove dust and foreign materials from the housing and connecting parts.
8. Do not fray, damage, machine, heavily bend, pull out or twist the power cord.
9. Please check the evidence of moisture intrusion in the electrical components.
Replace the parts or mask it with insulation tapes if moisture intrusion was confirmed.
10. Do not touch the icemaker with hands or tools to confirm the operation of geared motor.
11. Do not let the customers repair, disassemble and reconstruct the refrigerator for themselves.
It may cause accident, electric shock, or fire.
12. Do not store flammable materials such as ether, benzene, alcohol, chemicals, gas, or medicine in the refrigerator.
13. Do not put flower vase, cup, cosmetics, chemicals, etc., or container with full of water on the top of the refrigerator.
14. Do not put glass bottles with full of water into the freezer.
The contents shall freeze and break the glass bottles.
15. When you scrap the refrigerator, please disconnect the door gasket first and scrap it where children are not accessible.

4-7. Control of Interior Lights (FRS(N)-U20DA / EA / FA / GA)

| INPUT | CONTROL OBJECT |
|---|----------------|
| 1. Refrigerator door switch 2. Freezer door switch 3. Home bar door switch 4. Dispenser switch | Lamp |
| CONTENTS | |
| 1. Control refrigerator compartment lights R-Lights turn ON/OFF by R-door switch ON/OFF (※ For 10 minutes after sensing door open, the lights turn off automatically through door close is not sensed.) 2. Control of freezer compartment lights. F-Light turn ON/OFF by F-door switch ON/OFF (※ For 10 minutes after sensing door open, the lights turn off automatically through door close is not sensed.) 3. R-lights ON/OFF by home bar door switch ON/OFF. (for only model with home bar) R-lights turn ON for 10 minutes after sensing home bar door switch open. 4. Dispenser lamp control (for only model with water/ice dispenser) Dispenser lamp turns ON/OFF by Dispenser switch. Dispenser lamp turns ON for 4 seconds after sensing switch close. | |

CONTENTS

REMARKS

5. Control way of Errors (if any)

1) "F-sensor" error

Cause : F-sensor open or short

Control : Condition of ambient temperature

How to reset : If F-sensor is normal, the error is terminal temperature.

| | | | | | | |
|--------------|---------|---------|---------|---------|---------|----------|
| RT-S | ~ 9℃ | ~ 15℃ | ~ 21℃ | ~ 31℃ | ~ 41℃ | Over 41℃ |
| ON/OFF (min) | 14 / 50 | 16 / 41 | 27 / 45 | 26 / 22 | 35 / 20 | 35 / 20 |

2) "R-sensor" error

Cause : R-sensor open or short

Control : Condition of ambient temperature

How to reset : If R-sensor is normal, the error is terminal temperature.

| | | | | | | |
|--------------|------|--------|--------|-------|-------|----------|
| RT-S | ~ 9℃ | ~ 15℃ | ~ 21℃ | ~ 31℃ | ~ 41℃ | Over 41℃ |
| ON/OFF (min) | OFF | 3 / 50 | 2 / 10 | 3 / 7 | 4 / 6 | 6 / 4 |

3) "RT-sensor" error

Cause : RT-sensor open or short (full down)

Control : Normal operation, deletion of control by RT-sensor

If RT-sensor is normal, the error is terminated automatically.

4) "D-sensor" error

Cause : D-sensor open or short (full down)

Control : Time limit (30 min) of defrosting return

If D-sensor is normal, the error is terminated automatically.

5) "Door" error

Cause : in case it senses that door is open for more than 1 hour.

Control : Deletion of function related door switch sensing

If door switch (open & close) is sensed, the error is terminated automatically.

6) "Cycle" error

Cause : in case comp. works for over 3 hours when D-sensor temp. is over -5℃

Control : normal operation

When D-sensor temp. is below -5℃ in comp. off it is terminated.

7) "Return after defrosting" error

Cause : in case defrosting return is done by time limit of 80 min

Control : Deletion of Pre-cool mode in defrosting mode

If defrosting return is done by D-sensor, it is terminated.

8) A/S forced defrosting mode

Push "REFRIGERATOR SET" button 5 times while pushing "FREEZER SET" button Simultaneously.

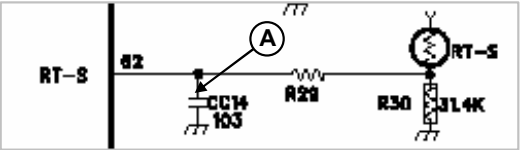

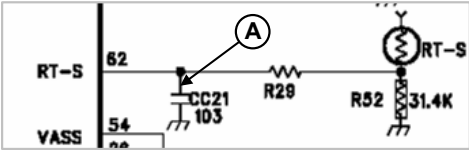

Control : A/S forced defrosting control (Pre-cool is deleted)

If D-sensor temp. is over 10℃, the mode is terminated automatically.

When all error code is normal, the Refrigerator reset

4-10-2. FRS(N)-U20DA/EA/FA/GA (CLED Display of Front PCB)

4-13. Automatic Icemaker (FRS(N)-U20DA/EA/FA/GA)

| INPUT | CONTROL OBJECT |
|--|----------------------|
| Full ice sensing switch Ice Maker Lock Sensors | Ice separating motor |
| CONTENTS | REMARKS |
| <p>1. Flow of ice making</p> <pre> graph TD START([START]) --> IM[Ice making mode] IM --> ISM[Ice separating mode] ISM -- "(water supply stand by)" --> IM ISM --> WSM[Water supply mode] WSM --> WSCM[Water supply check mode] WSCM --> RETURN([RETURN]) </pre> <p> ▶ Ice is being made ▶ Ice tray is twisted to separate ice cubes ▶ Water is supplied to ice tray ▶ Check is water is supplied OK. </p> <p>1) Press TEST switch under the Icemaker for more than 1 second and test starts. * Test mode starts from ice separating mode. * In case test switch has an error of short, test is done only once.</p> | |

| CONTENTS | REMARKS |
|----------|---------|
|----------|---------|

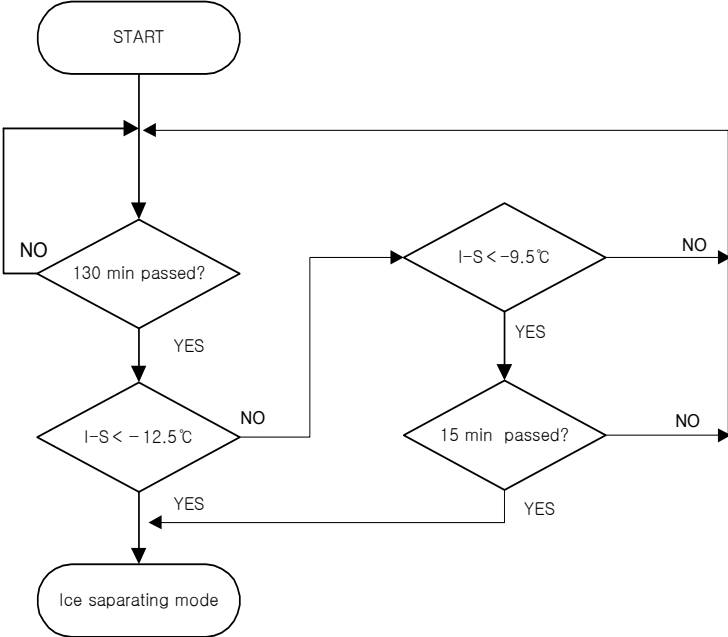

- 2) With the initial power input, Ice tray turns to be horizontal and ice making mode starts.

- 3) Control of water hose heater
 - * Heater is always ON if RT-sensor has an error or RT is below 15 degree.
 - * Heater is always ON for 60 minutes (max. Limit time) if Flow-sensor has an error

- 4) Water supply stand-by
 - Condition : if ice is sensed full
 - Operation : proceeds to Ice making mode (Ice separating and water supply Modes stop)

- 5) Crusher Function
 - It stops operation when freezer door is open
 - It operates if freezer door is closed.

2 Ice making mode

- 1) Ice making stops if ice-sensor is below -12.5°C after 130 minutes.

- 2) Ice making also stops if ice-sensor is below -9.5°C for 15 minutes, though ice-sensor is not below -12.5°C after 130 minutes.

- 3) In case of ice sensor, ice making stops after 4.8 hours.

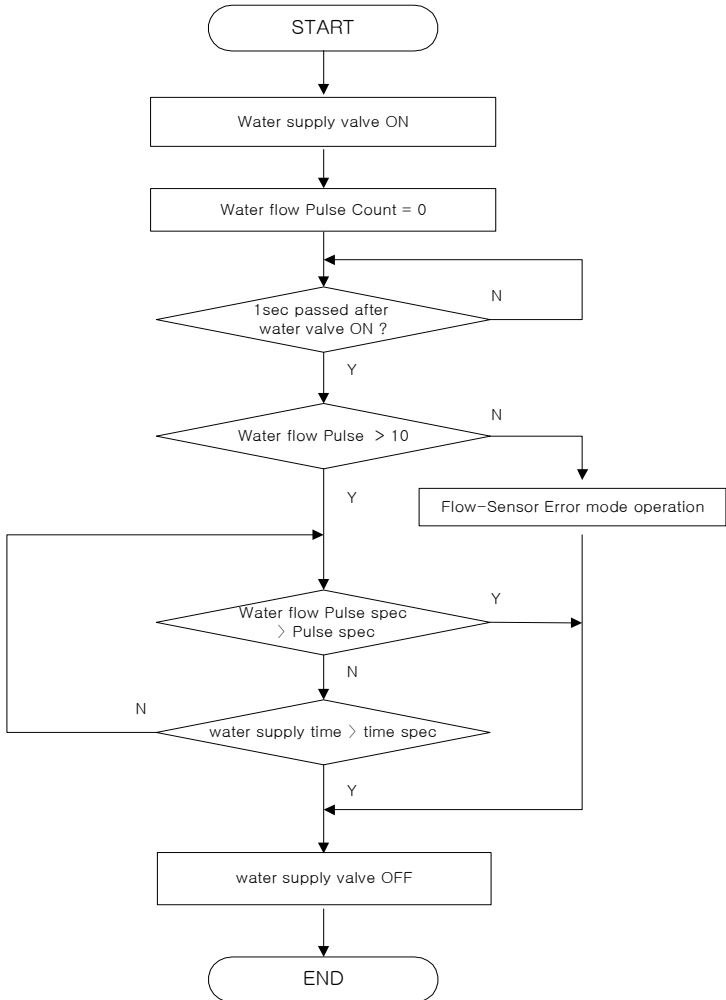

| CONTENTS | REMARKS |
|----------|---------|
|----------|---------|

3. Ice separating (drop) mode

- 1) Time of each zone used to verify level switch error
- 2) The rotation of motor is sensed at each zone
- 3) In case of level switch error, ice separation is done by time.
- 4) If ice separating motor has error, the mode stop.

4. Water supply mode

③ Water

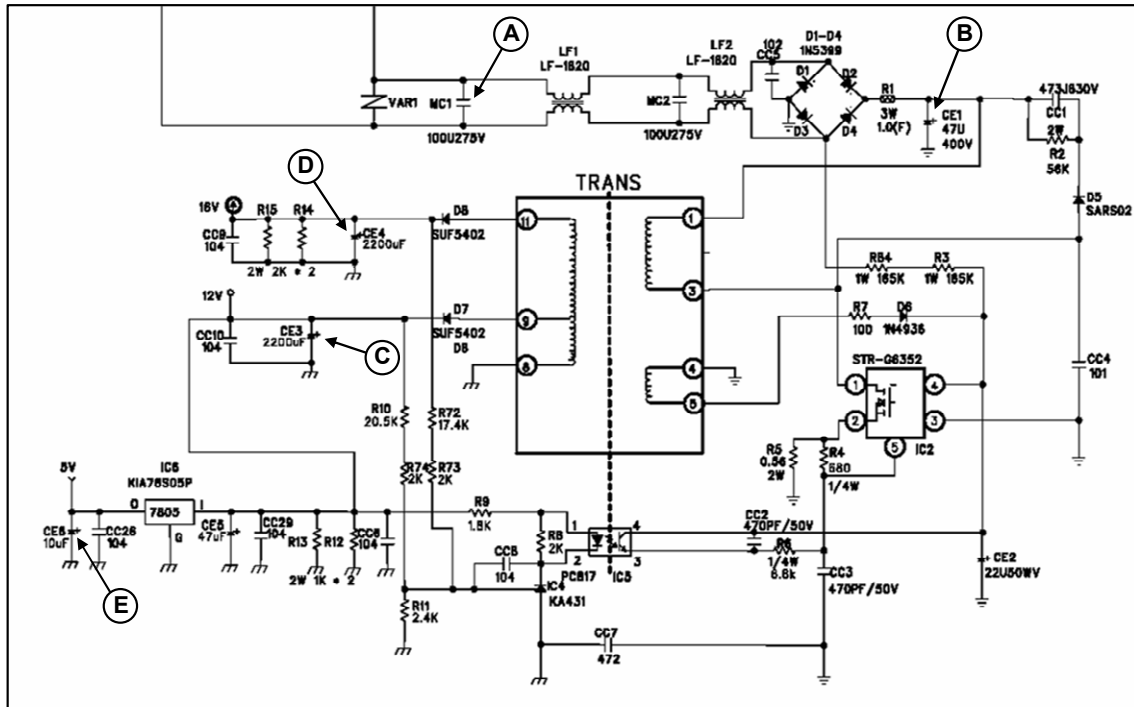

Delay time : A = 500ms, B = 500ms, C = 2.0s, D = 5.0s

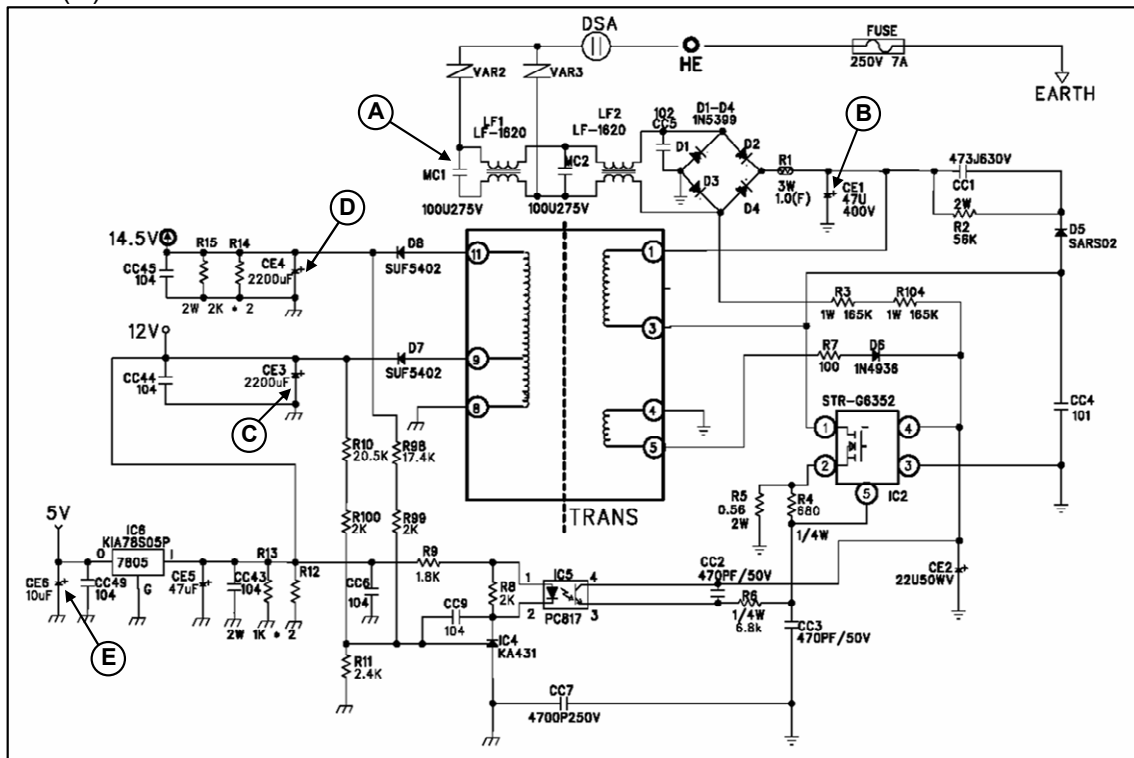

5. CIRCUIT OPERATION

5-1. Power Circuit Diagram

■ FRS(N)-U20IA

■ FRS(N)-U20DA/EA/FA/GA

※ Voltage of every part

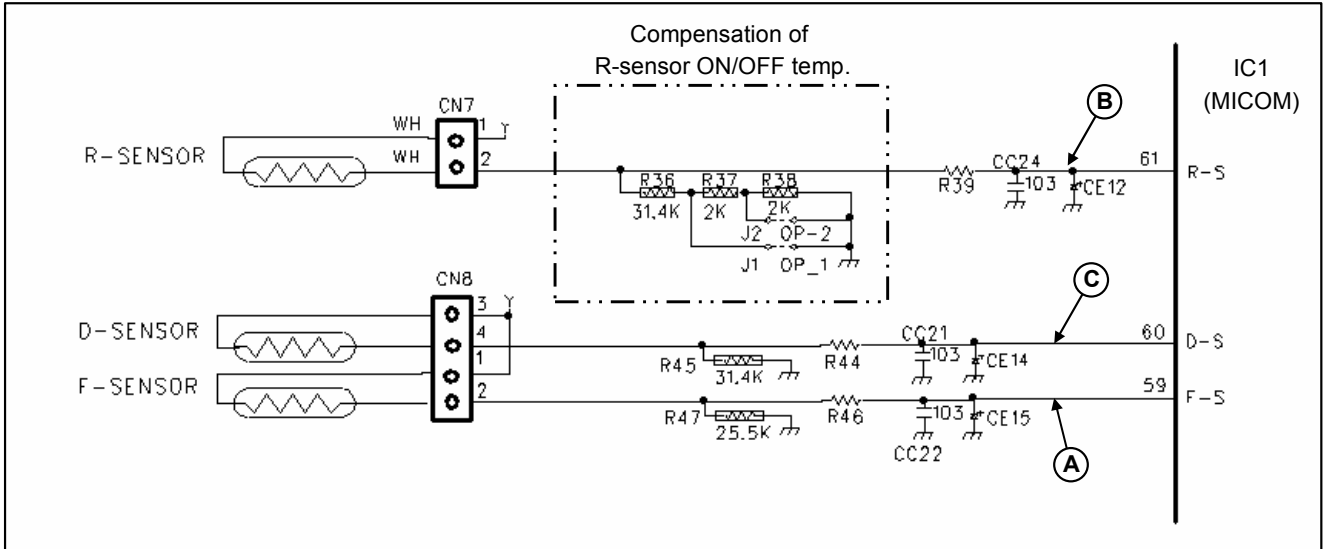

| Parts | A | B | C | D | E |
|---------|--------|--------|-------|---------|------|
| MC1 | | | | | |
| CE1 | | | | | |
| CE3 | | | | | |
| CE4 | | | | | |
| CE6 | | | | | |
| Voltage | 230Vdc | 310Vac | 12Vdc | 14.5Vdc | 5Vdc |

※ **Caution** : Since high voltage (DC310V) is maintained at the power terminal, please take a measure after more than 3minutes have passed after removing power cords in the abnormal operation of a circuit.

5-2. Function of Each Sensor

■ FRS(N)-U201A

| CONTENTS | REMARKS |
|----------|---------|
|----------|---------|

[F-sensor]

- 1) It senses the temperature of freezer compartment and control Comp., F-fan ON/OFF
- 2) How it works;

| Working Point | Low ON | Mid OFF | High OFF |
|-----------------|----------|-----------|-----------|
| Working Temp. | -11 °C | -16 °C | -19 °C |
| Resistance | ≒ 9.32kΩ | ≒ 15.19kΩ | ≒ 15.58kΩ |
| Sensing Voltage | ≒ 3.24V | ≒ 2.93V | ≒ 2.73V |

[R-sensor]

- 1) It senses the temperature of refrigerator compartment and control R-fan ON/OFF
- 2) How it works;

| Working Point | Low ON | Mid OFF | High OFF |
|-----------------|-----------|-----------|-----------|
| Working Temp. | 7.7 °C | 5.2 °C | 3.2 °C |
| Resistance | ≒ 23.33kΩ | ≒ 24.05kΩ | ≒ 24.76kΩ |
| Sensing Voltage | ≒ 2.96V | ≒ 2.83V | ≒ 2.72V |

[D-sensor]

- 1) It senses return point of defrosting heater.
- 2) How it works;

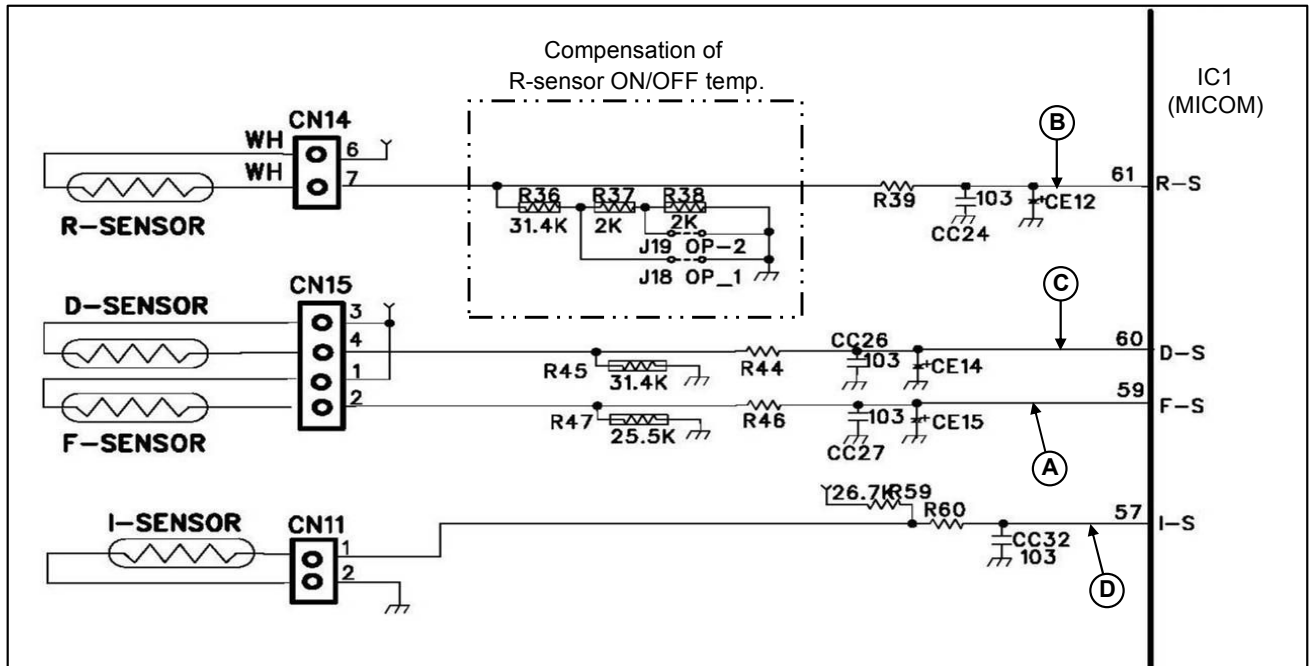

| Working Point | Return point of defrosting heater |
|-----------------|-----------------------------------|
| Working Temp. | 13 °C |
| Resistance | ≒ 22.56kΩ |
| Sensing Voltage | ≒ 3.08V |

* In case temperature of refrigerator compartment is weak or insufficient though comp. and R-fan operate in normal way;

- 1) Cut J1 on the M-PCB, then temp. is lowered 1.5 °C than [Mid OFF point]
- 2) Cut J1 and J2 on the M-PCB, then the temp. is lowered 3 °C.

■ FRS(N)-U20DA/EA/FA/GA

5-4. Fan Function

1. Circuit Diagram

■ FRS(N)-U20IA

■ FRS(N)-U20DA/EA/FA/GA

2. Explanation for the operation

* TA7291P is the drive IC for the only DC motor, and used for control of the fan motor

* One input and output is used for the control of the fan motor

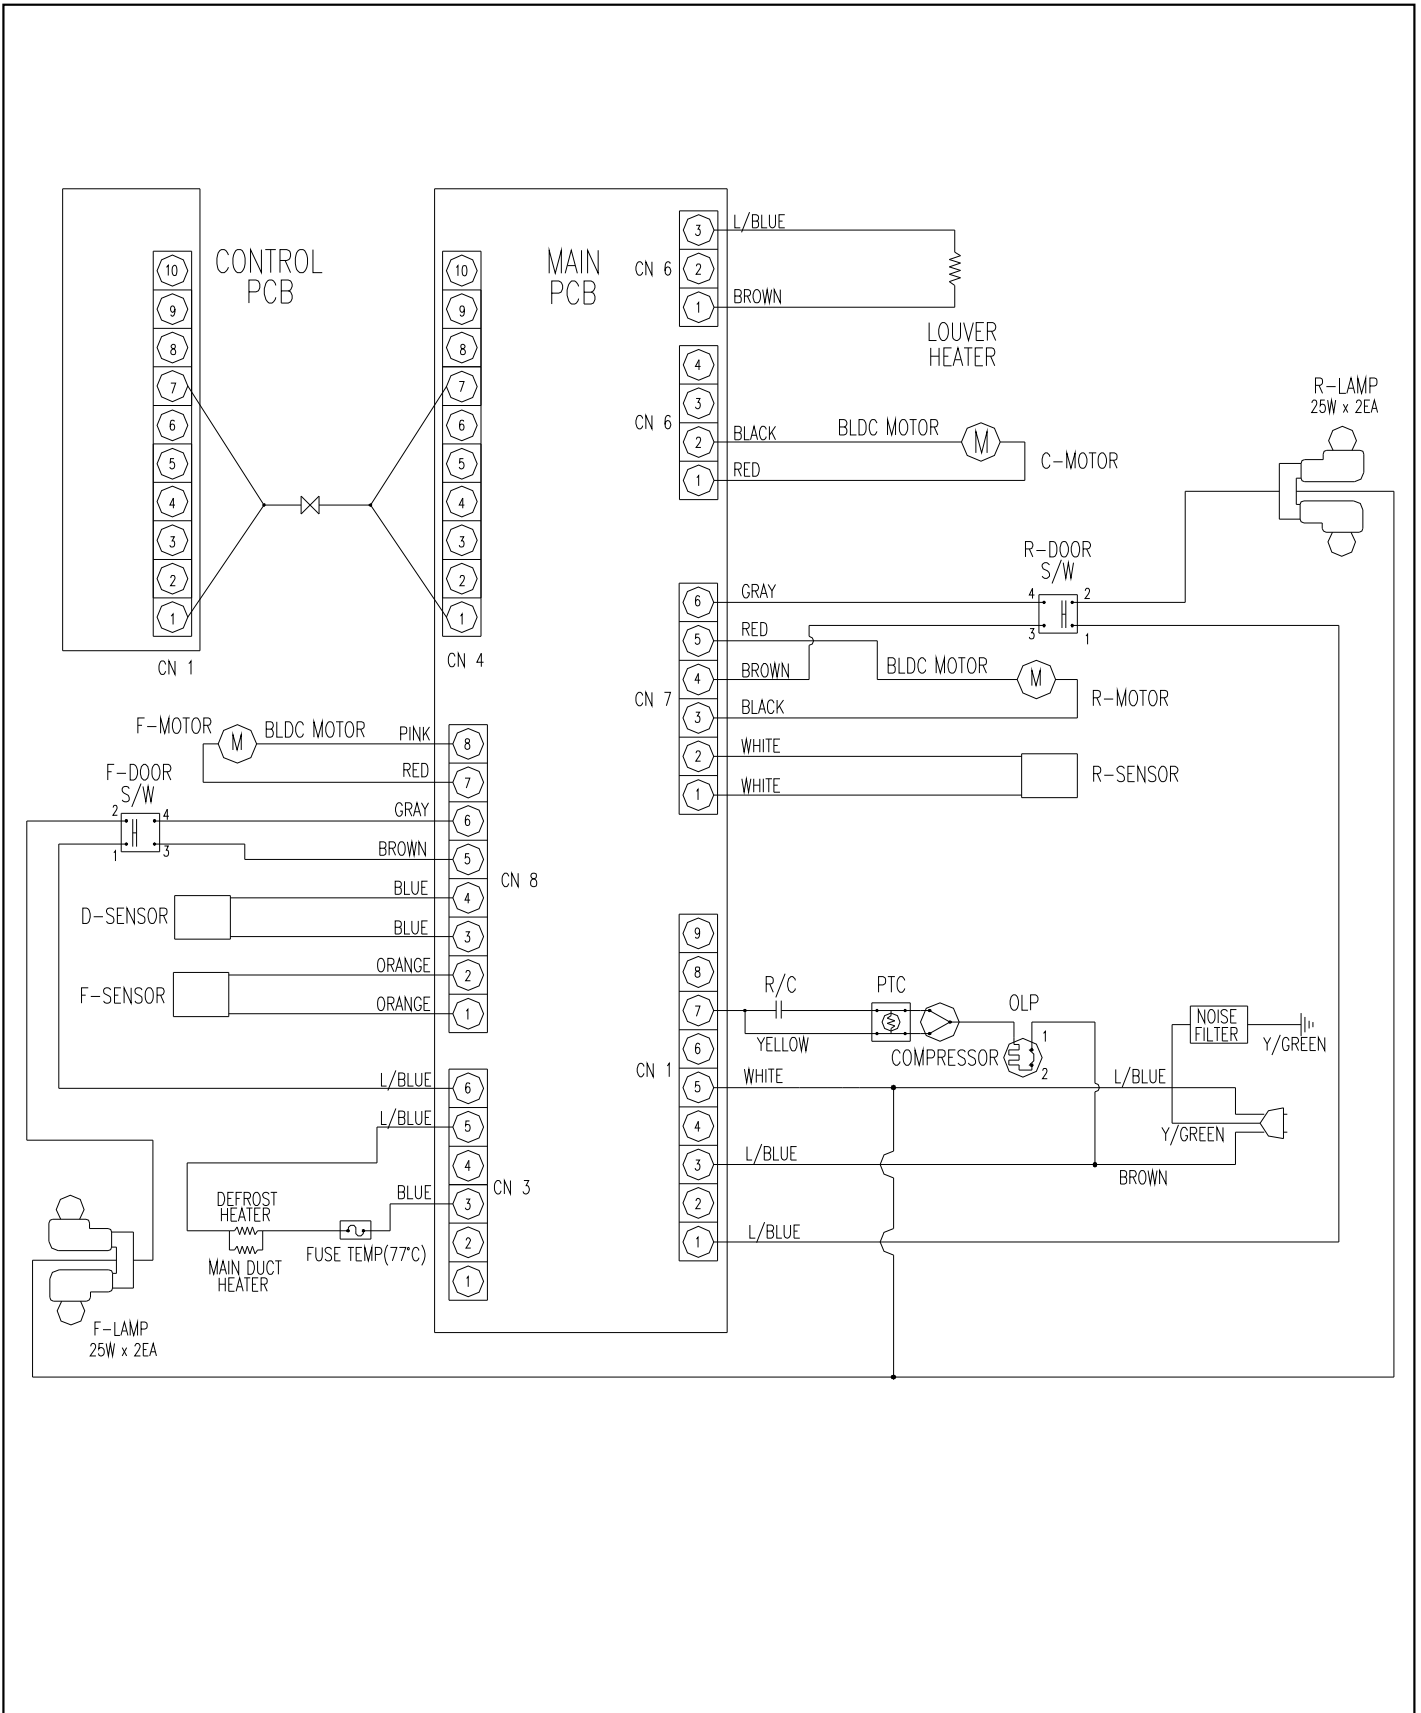

| Input | Output | Remark |
|--|--|--------|
| Motor IC No.5 Pin (R:MT2/F:MT3/C:MT1) | Motor IC No.2 Pin (R:MT2/F:MT3/C:MT1) | |
| High | High | 13V |
| Low | Low | Stop |

- Vref is the reference voltage for the adjustment of the output voltage by the voltage distribution of Vs (Maximum output voltage), and the output voltage applied to the fan is determined by the PWM control using the software.

9. TROUBLE DIAGNOSIS

9-1. Faulty Start (F/R lights OFF , F-PCB Power OFF)

※ How to replace Front PCB

- 1) Insert a flat tip driver into the left down groove of panel frame and snap it out smoothly.
- 2) Separate 2 housings of 10P / 7P from Front PCB. (Do not hold only wires to pull out.)
- 3) Unscrew (7 points) to remove Front PCB.

* Follow the reverse order when assembling.

9-2. Freezer Compartment

9-2-1. Freezing failure . (Foods are not frozen / cold.)

Removing and replacing Freezer parts

(1)

- 1) Remove foods.
- 2) Remove Ice Bucket, shelves and cases in Freezer compartment.

(2)

- * Remove 2 screws of Ice Maker.

(4)

- * Remove 4 screws of Geared Motor.

(3)

- * Remove the Housing of Ice Maker AS. (Right side)

(5)

- * Remove the Housing of Geared Motor AS. (Center)

Removing and replacing Freezer parts

(6)

* Remove light cover screws.

(7)

* Pull down smoothly the bottom of light cover to remove.

(8)

* Remove the screw of bracket F-Lamp.

(9)

* Remove the left housing.

(10)

* Pull out smoothly the bracket F-Lamp AS. to remove.

(11)

* Hold the end of F-Fan cover and pull forward slowly.

(12)

* Remove the screw cap on the F-Louver A with a flat tip driver.

(13)

* Remove 3 screws of F-Louver A.

(14)

* Hold the end of F-Louver A and pull forward slowly.

(15)

* Remove the housing.

(16)

* Remove the screw of F-Return cover and pull out cover.

(17)

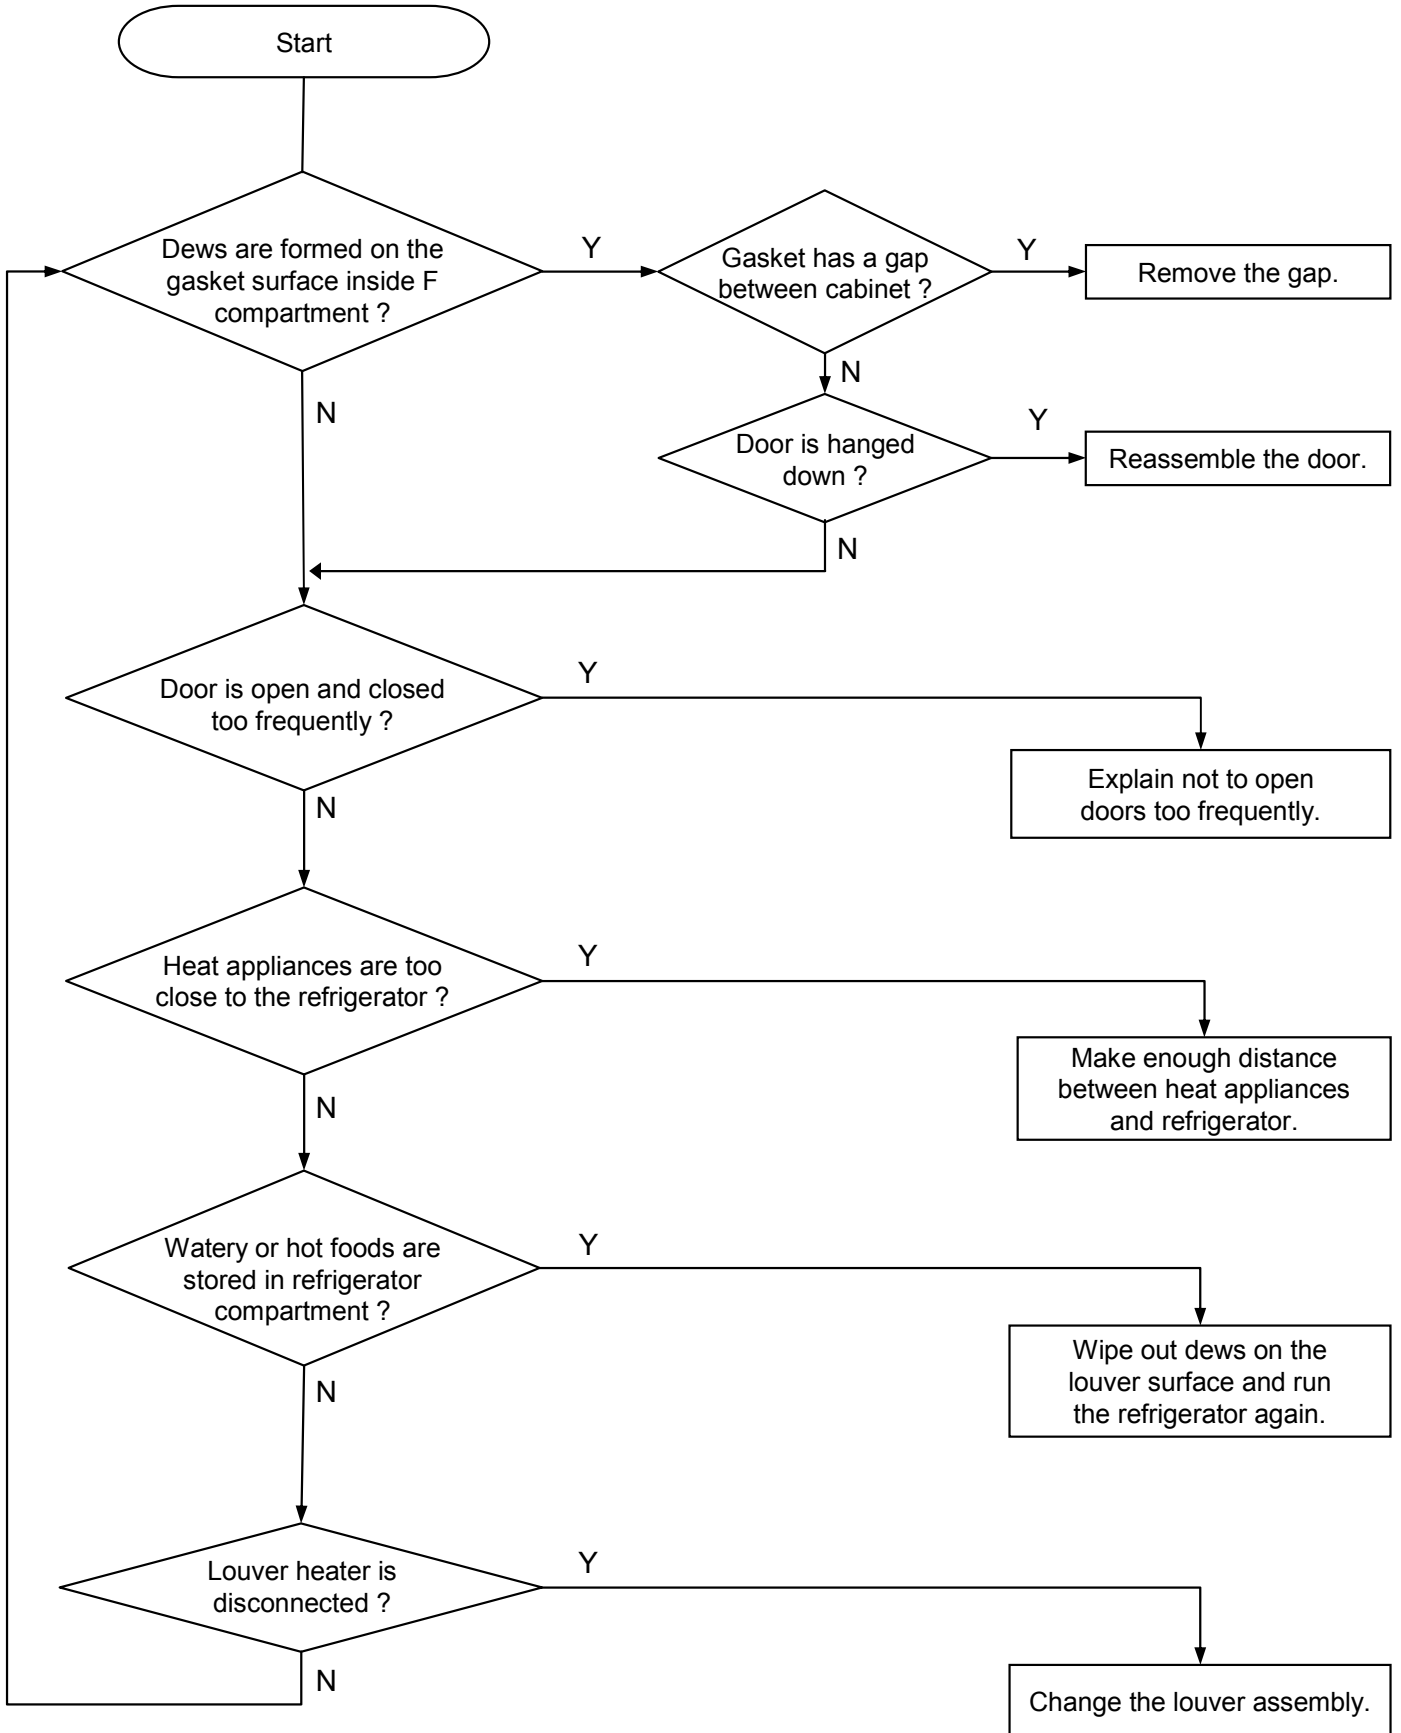

* Hold the end of F-Louver B and pull forward slowly.

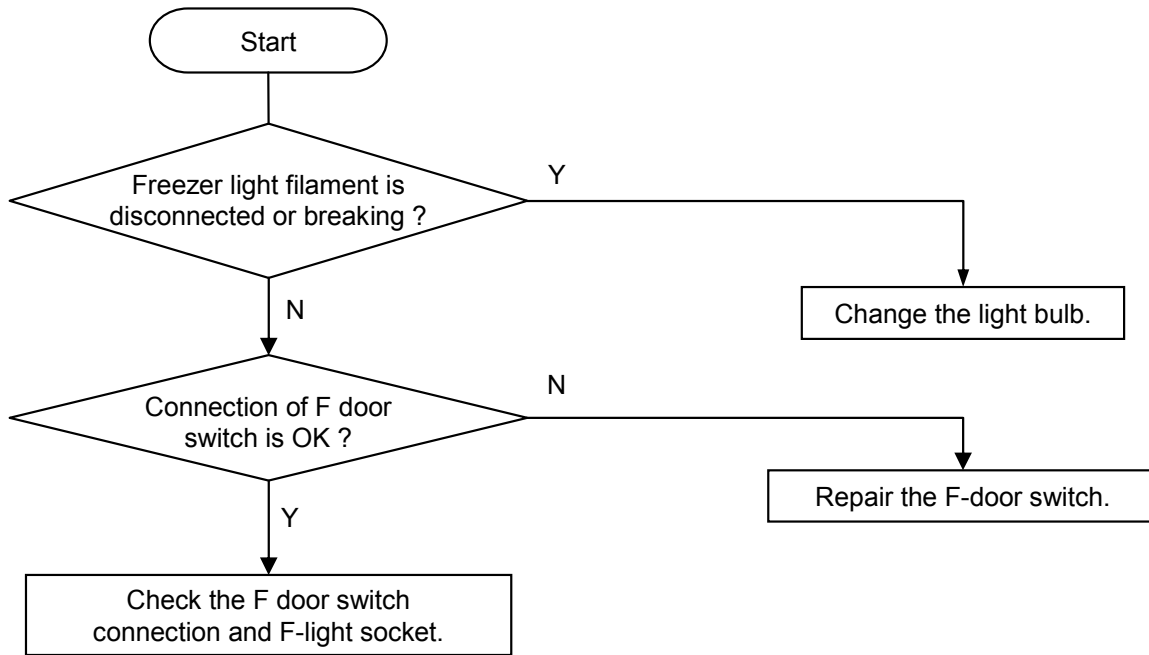

Removing and replacing Freezer parts

9-2-2. Ice Formation on F-Louver

9-2-3. Disconnection / breaking of Freezer Lights Wires

Change of F Lights

Change of F Door Switch

① * Remove 2 screws of light cover.

② * Hold the bottom of light cover and pull forward to remove.

③ * Change the light bulb. (AC240V 25W)

※ Follow the reverse order of disassembling after changing the light.

① * Insert a flat tip screw driver into a gap of door switch to pull forward.

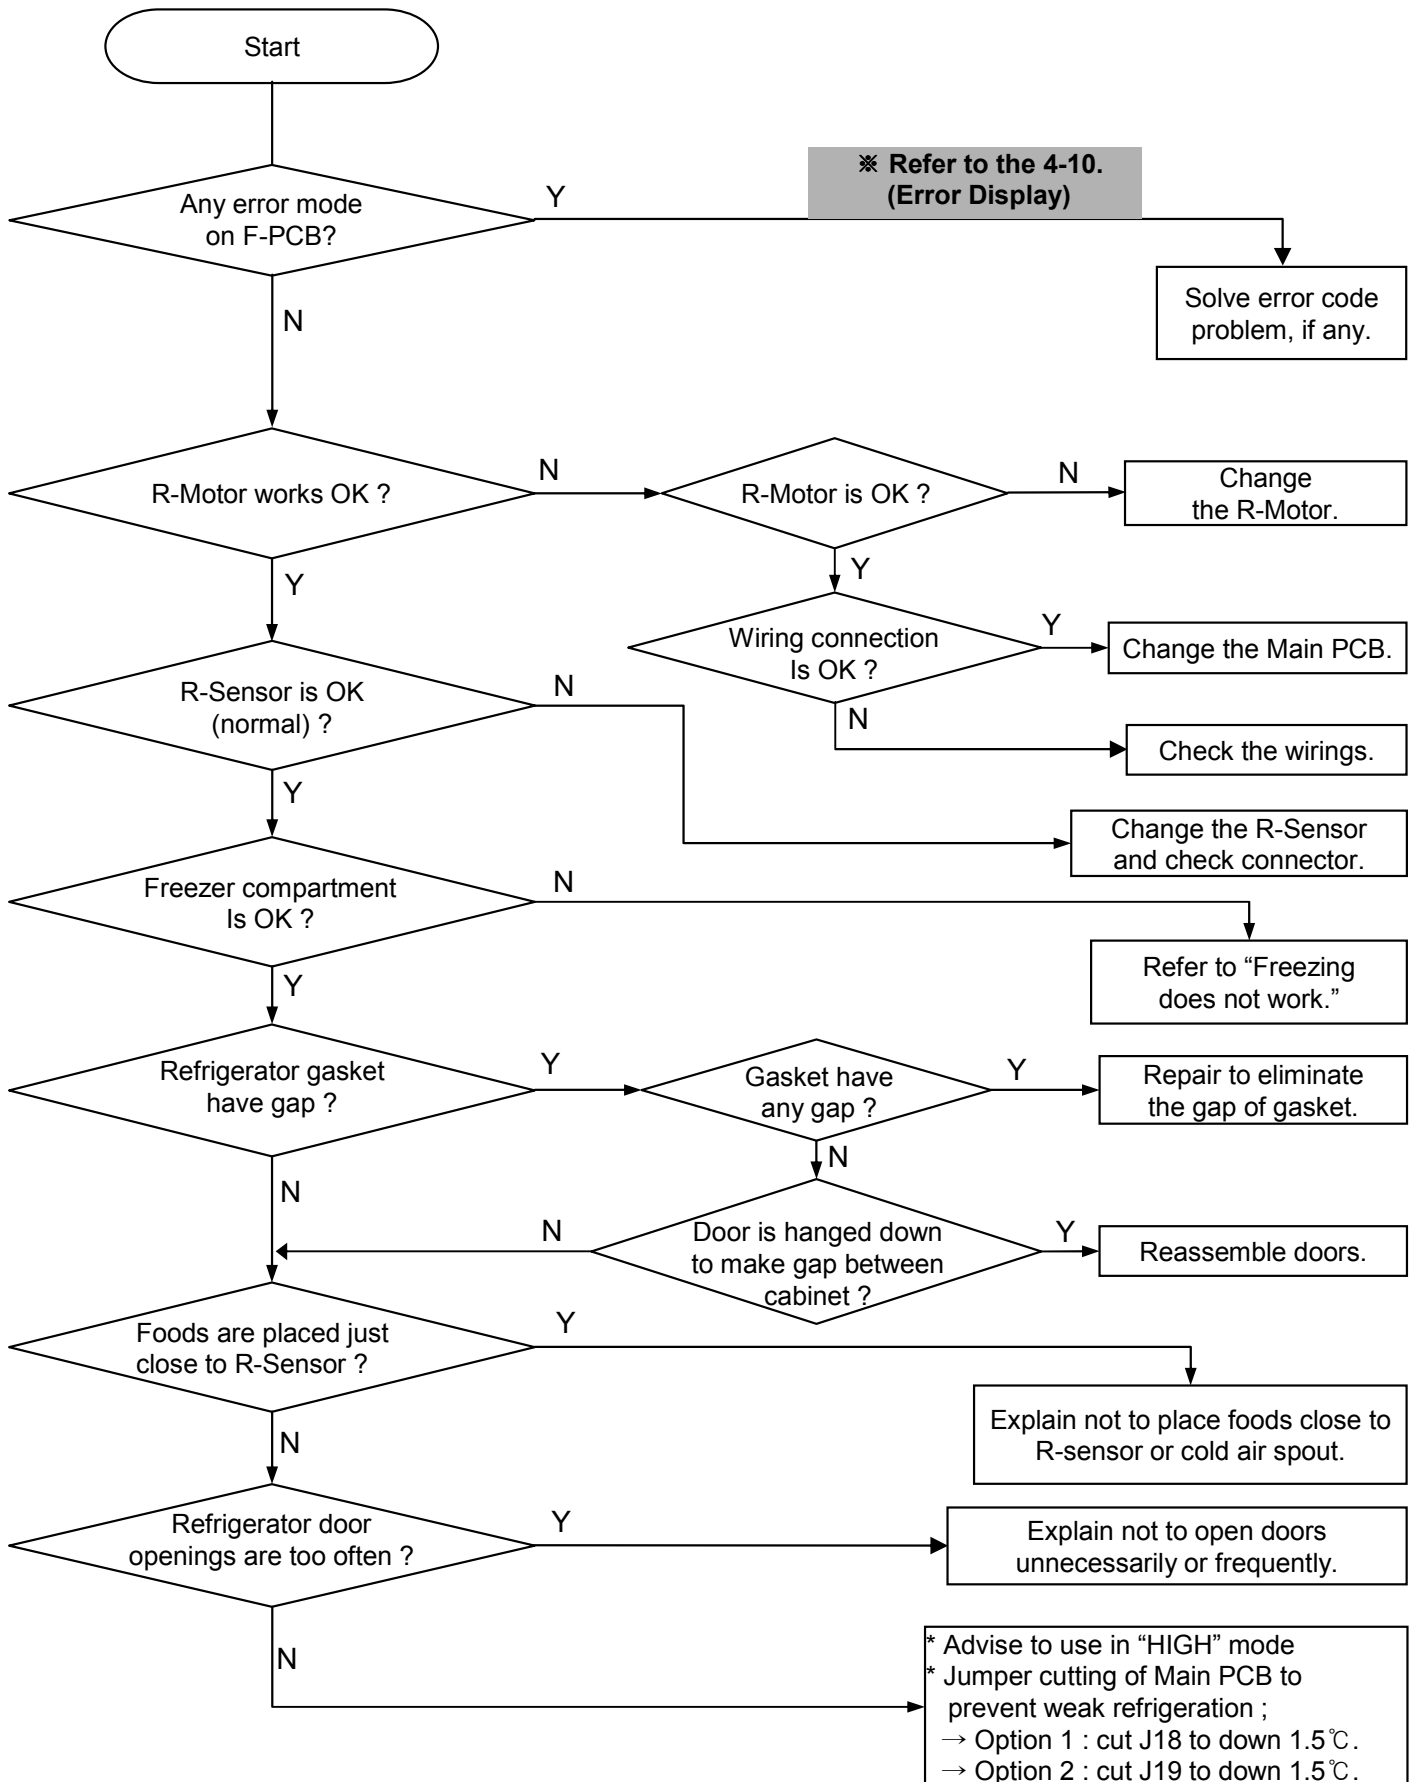

② * Disconnect the housing and change the switch for a new one.

※ Be careful when changing the switch. F and R door switch are different in type and shape.

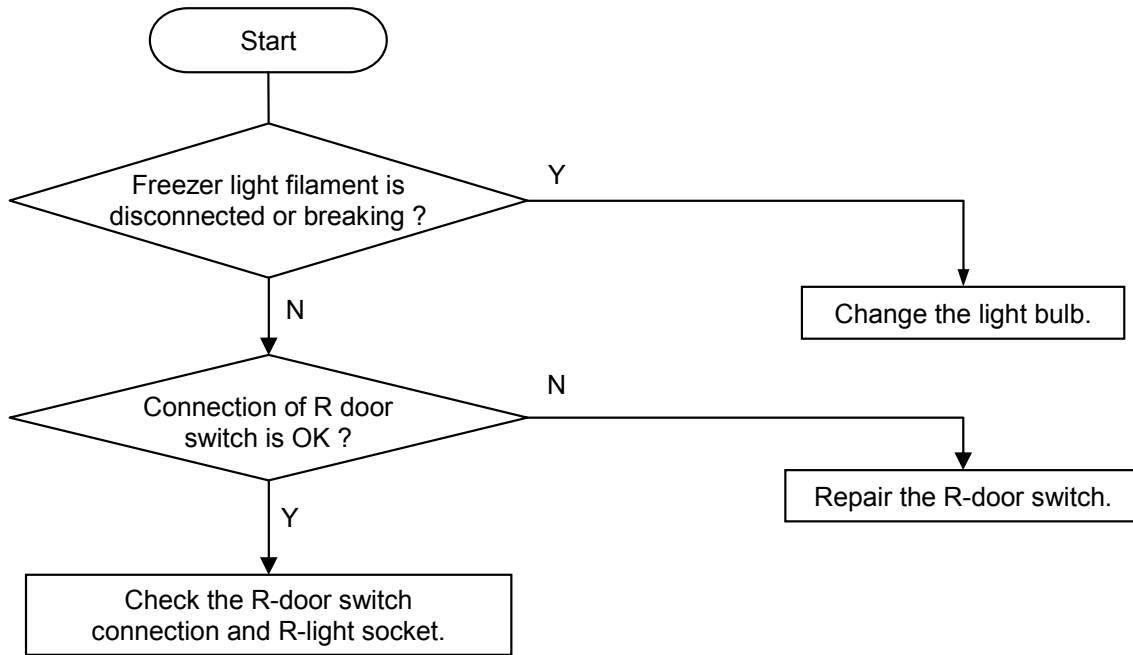

※ Follow the reverse order of disassembling after changing the switch.

9-3. Refrigerator Compartment

9-3-1. Refrigeration failure (Foods does not get cool or cold soon.)

9-3-2. Disconnection / Breaking of Refrigerator Lights Wires

Change of F Lights

* Remove screws of light cover.

* Hold the bottom of cover and pull forward to remove.

* Change the light bulbs. (AC240V 25W)

※ Follow the reverse order of disassembling after changing the light.

Change of F Door Switch

* Insert a flat tip screw driver into a gap of door switch to pull forward.

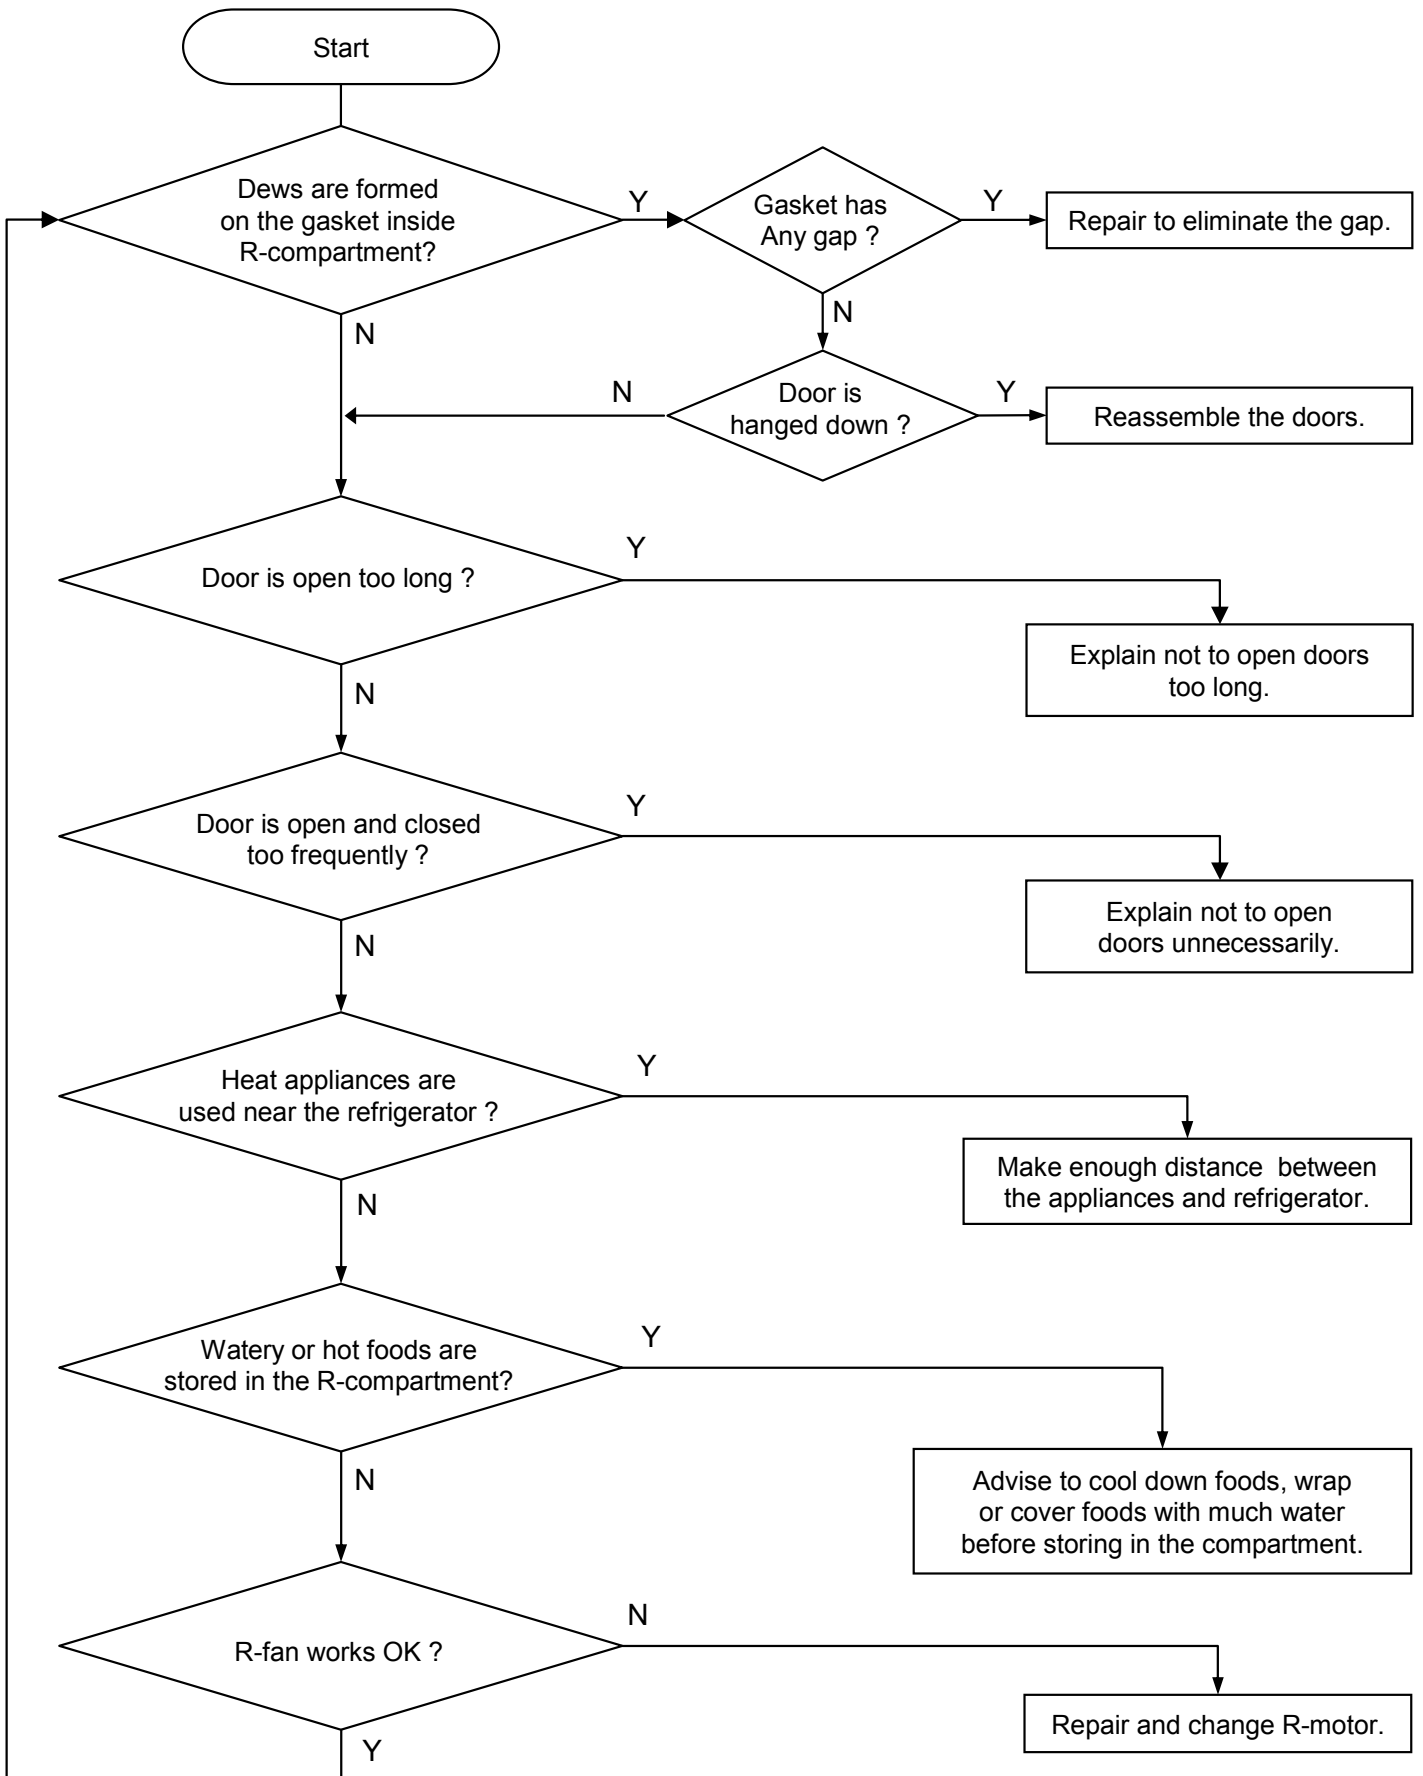

* Disconnect the housing and change the switch for a new one.

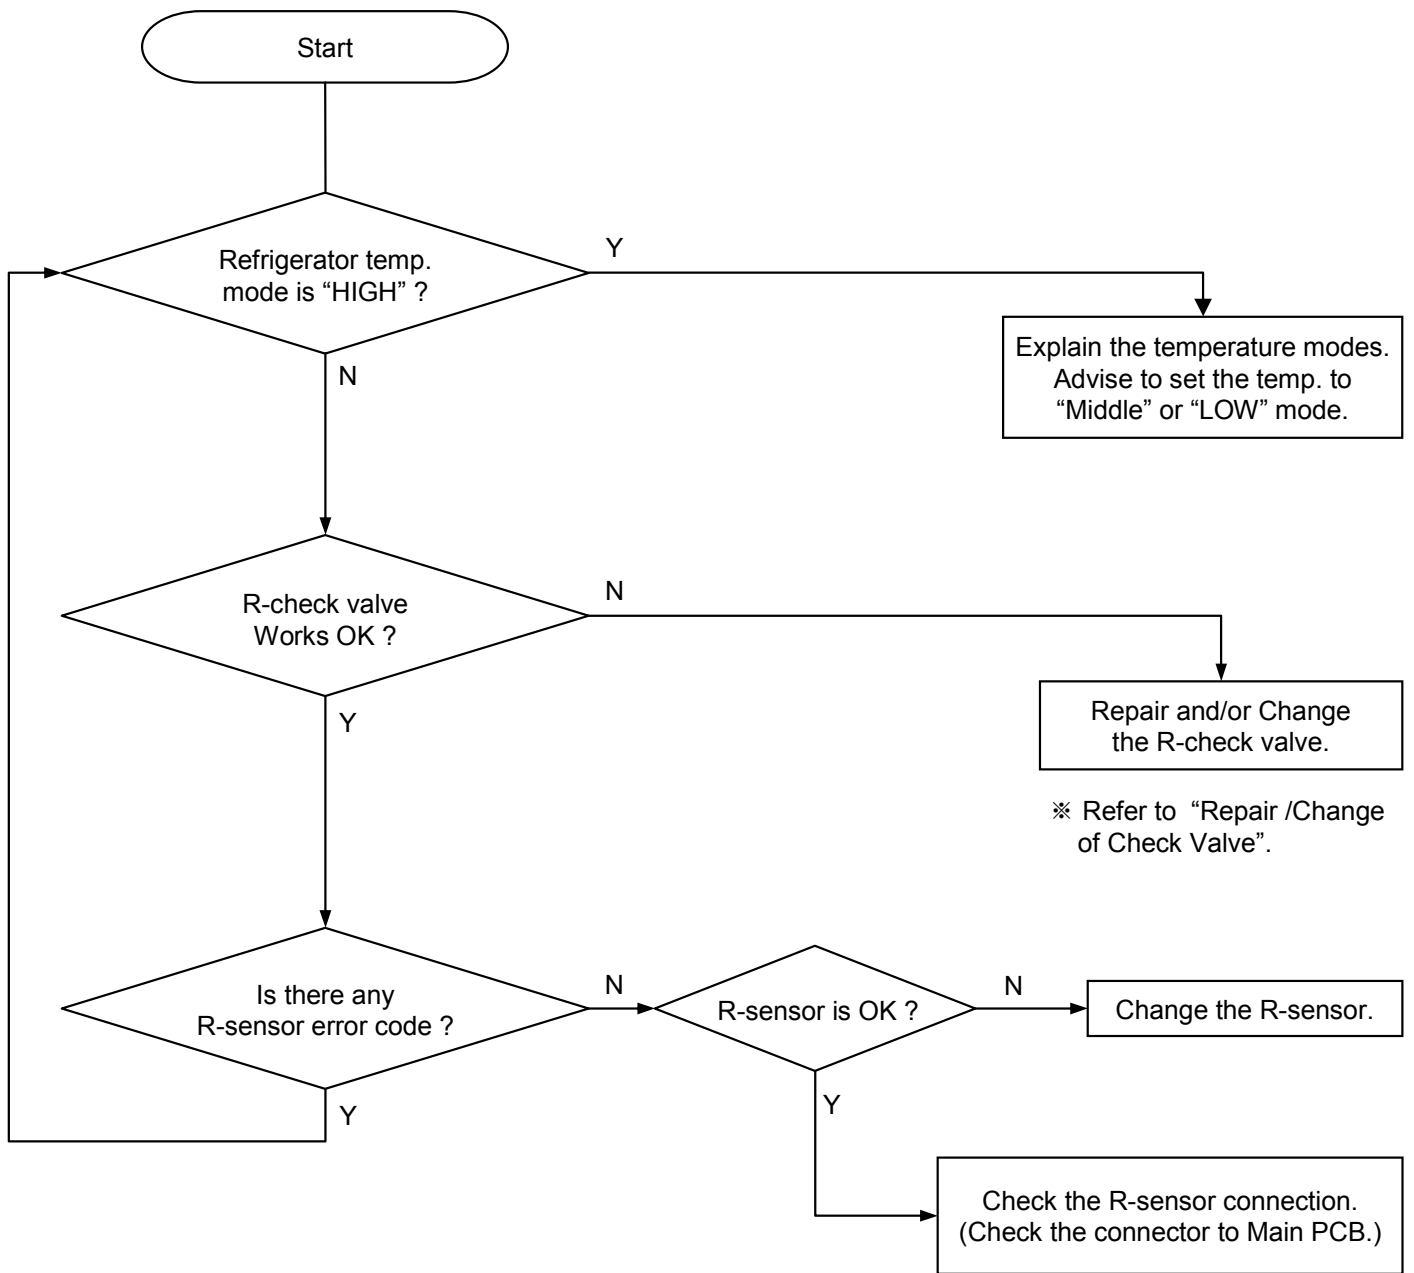

※ Be careful when changing the switch. F and R door switch are different in type and shape.

※ Follow the reverse order of disassembling after changing the switch.

9-3-3. Dews on Refrigerator Compartment

9-3-4. Excessive Refrigeration of Vegetable Case

Removing of Check Valve

* Remove screws of light cover.

* Hold the bottom and right of damper to pull down to remove.

* Hold the bottom of cover and pull forward to remove.

* Lift up a piece of Check Valve Flap and insert a finger to the valve frame to hold out.

* Disconnect light housing.

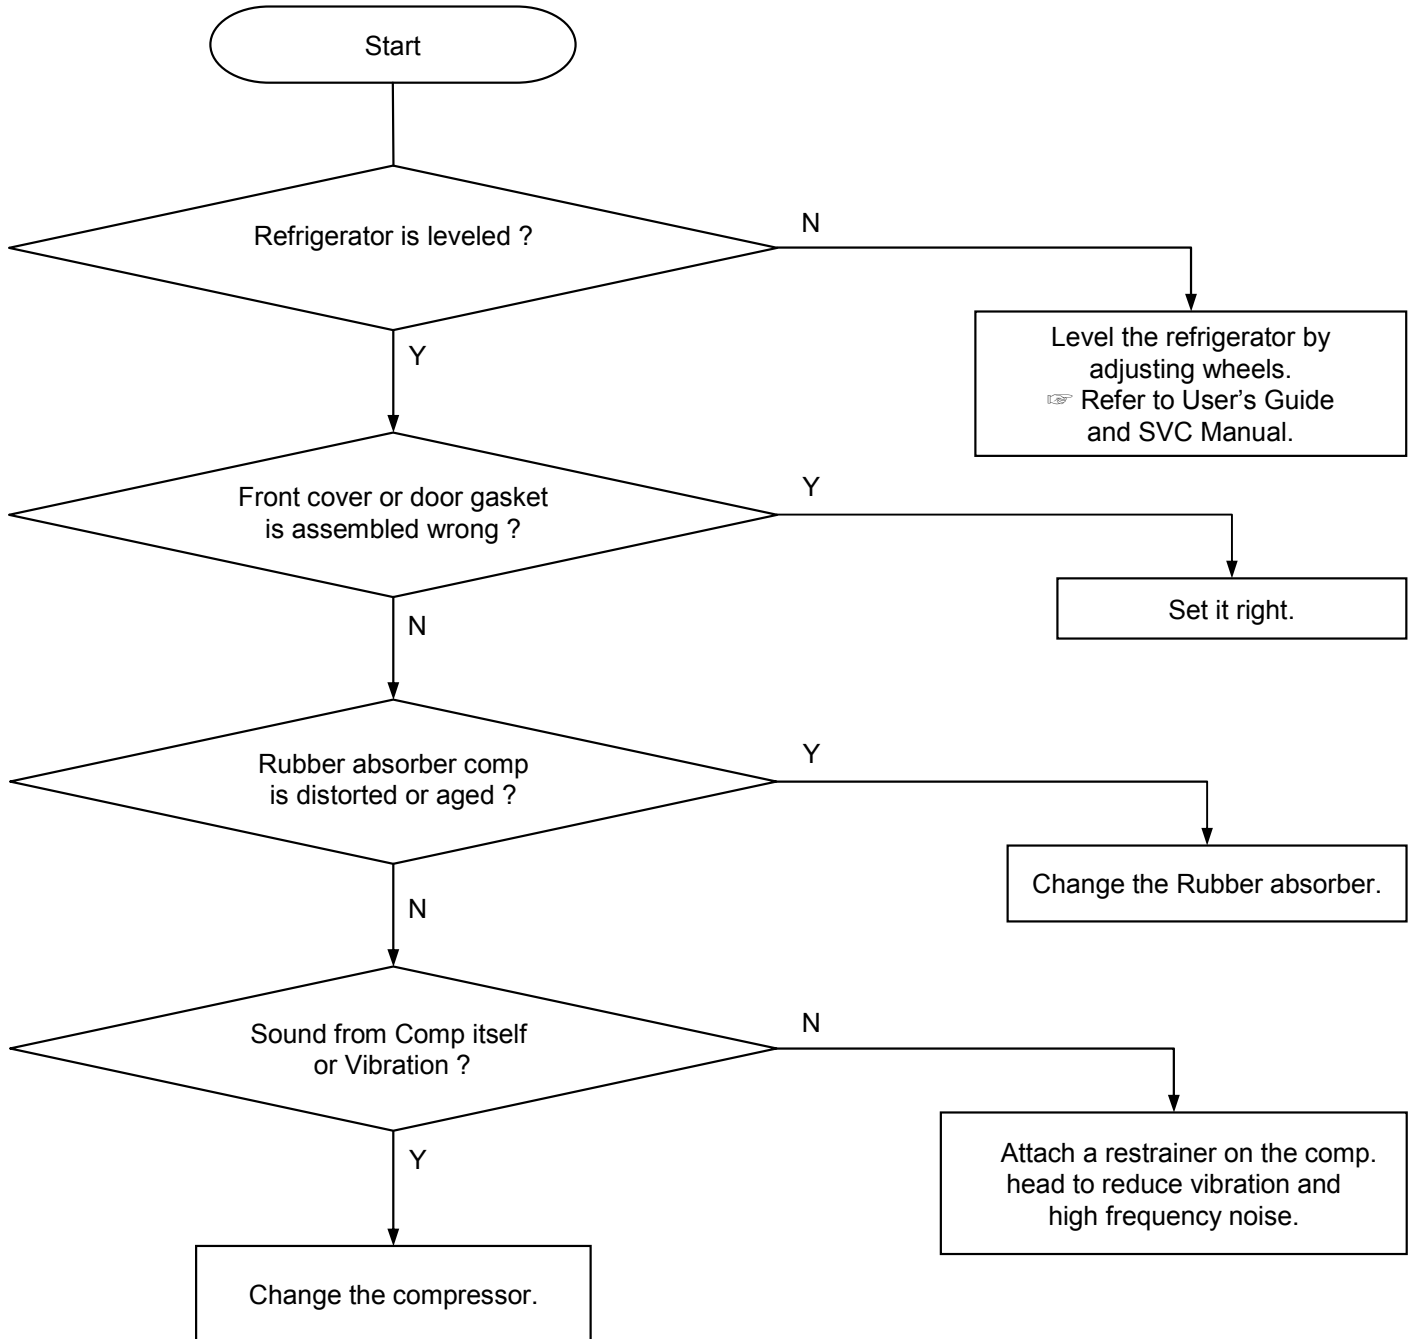

* Remove screws with a (+)screw driver.

9-4. Operation Noise of Refrigerator

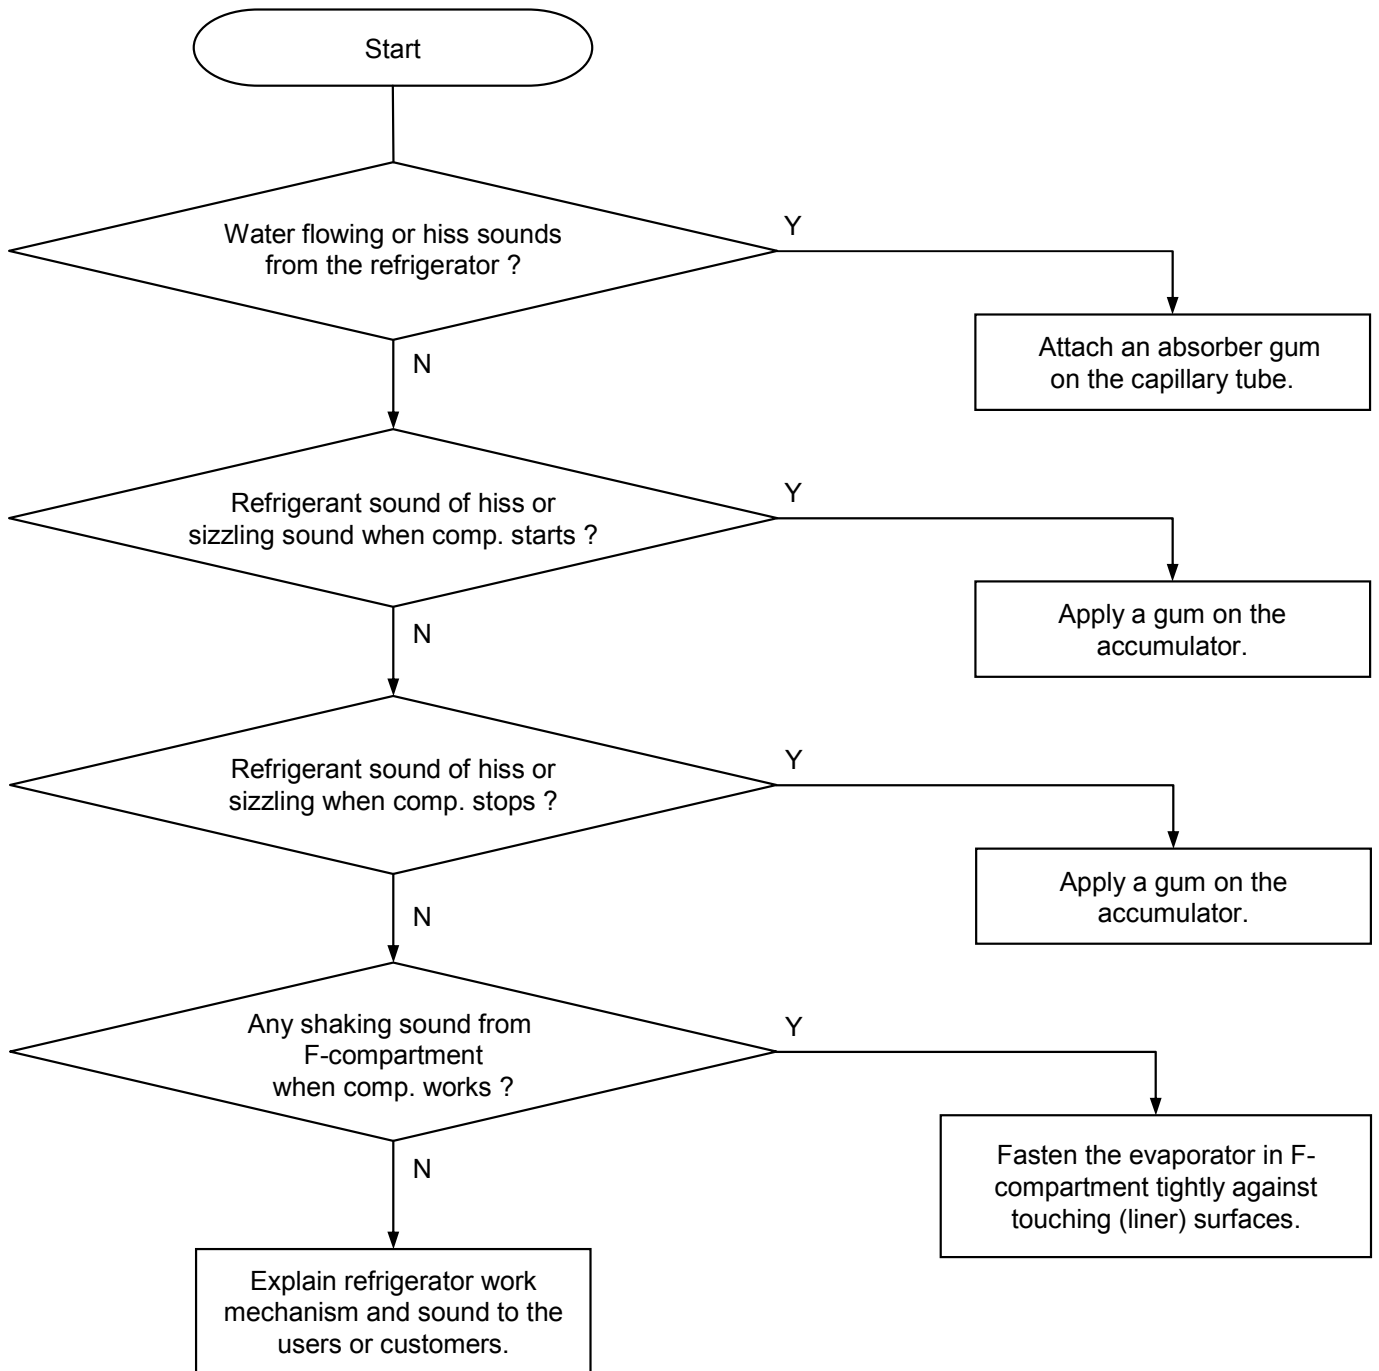

9-4-1. Comp. operation Noise

Remarks

- Compressor sound is somewhat normal because it works like a heart to circulate the refrigerant in the pipes during the refrigerator operation.
- Rattling or metallic touch sound of motor, piston of comp. can be heard when it starts or stops.

9-4-2. Refrigerant Flow Sound

Remarks

● Water flowing sound, hiss or sizzling sound can make while refrigerant in the pipes is changing from liquid to gas state when comp. starts or stops. It is normal to the refrigerator.

Troubleshooting of Evaporator Sound

1. Hiss Sound from Capillary Tube

1) "1" tube is used to connect the capillary tube and evaporator.
(2 welding points : ①, ②)

2) When such a sound is made, attach a absorber on the tube including 2 welding points.

2. Sizzling Sound from Accumulator

Attach a absorber on point ③ (accumulator).

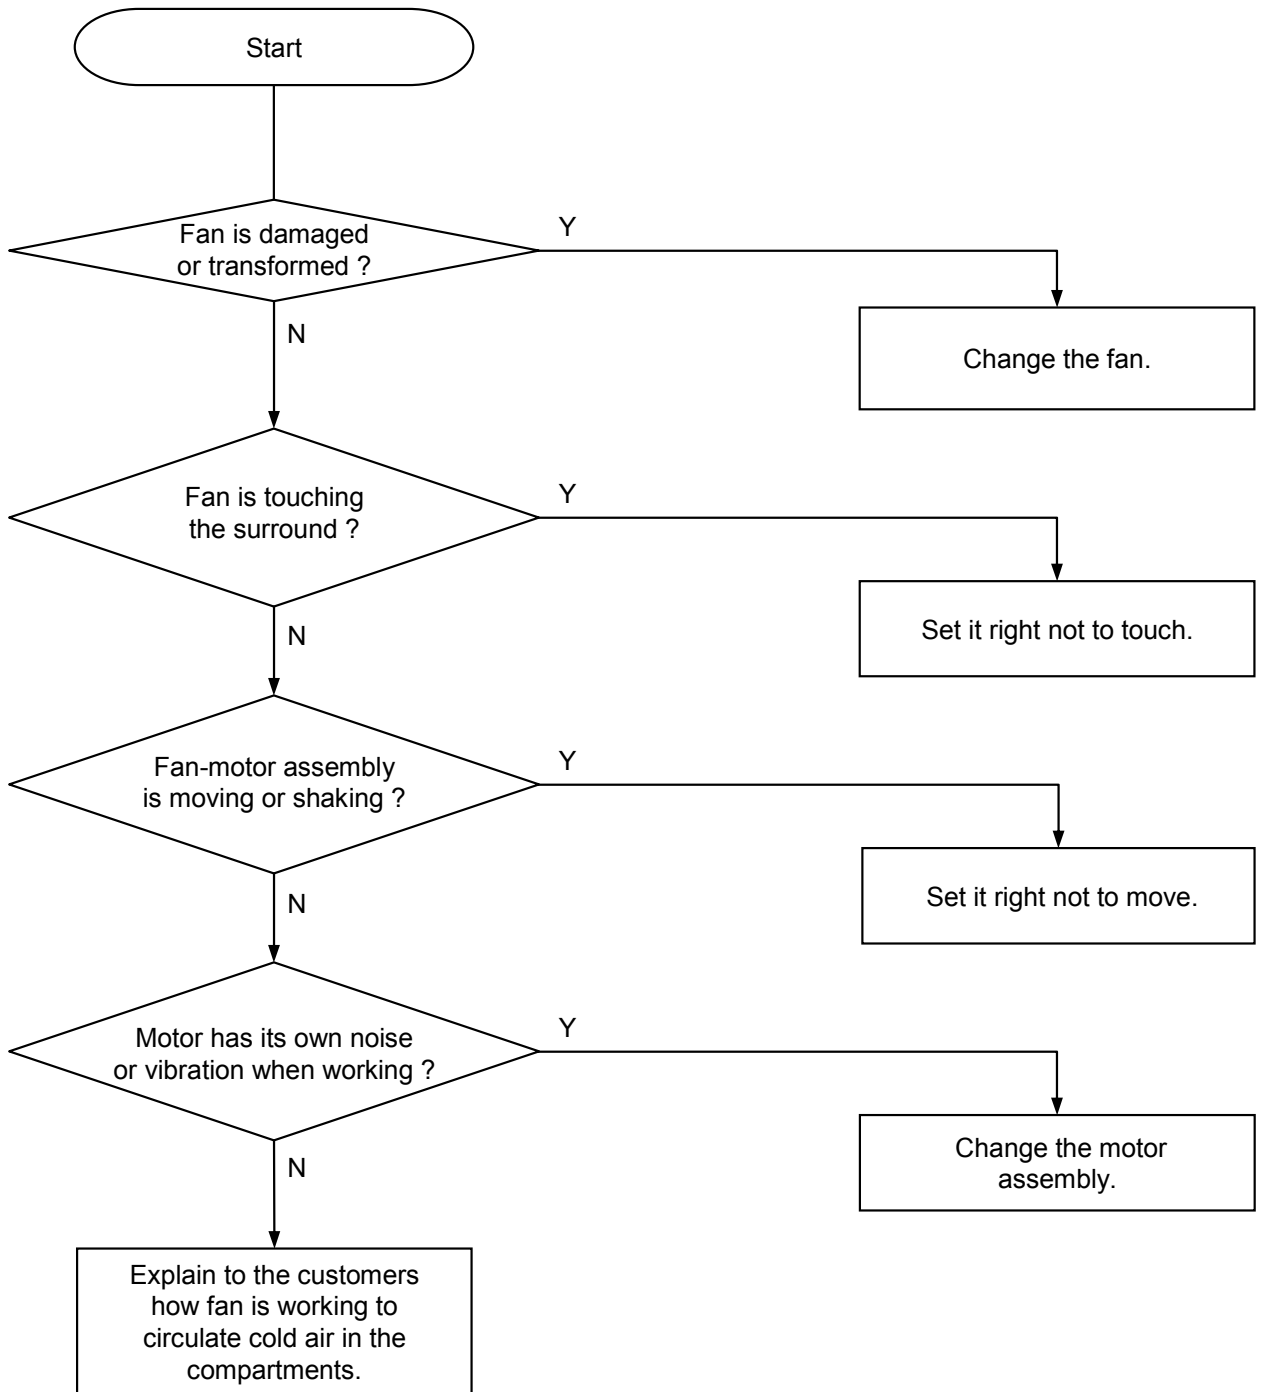

3. Shaking or trembling Sound of Evaporator

1) Check whether evaporator is fastened tight with the fasteners of ①, ②.

2) Insert a soft spacer (EPS) between left and right wall. Evaporator not to be shaken or trembled during refrigerator operation.

9-4-3. Fan Noise

| | |
|--|--|
| Remarks | |
| <p>● The fan is sending out cold air to circulate it through the compartments. When the air is touching the surface of louver or liner wall, such sound can make.</p> | |

Troubleshooting of Fan Noise

1. Fixing or Fastening of Fan Motor

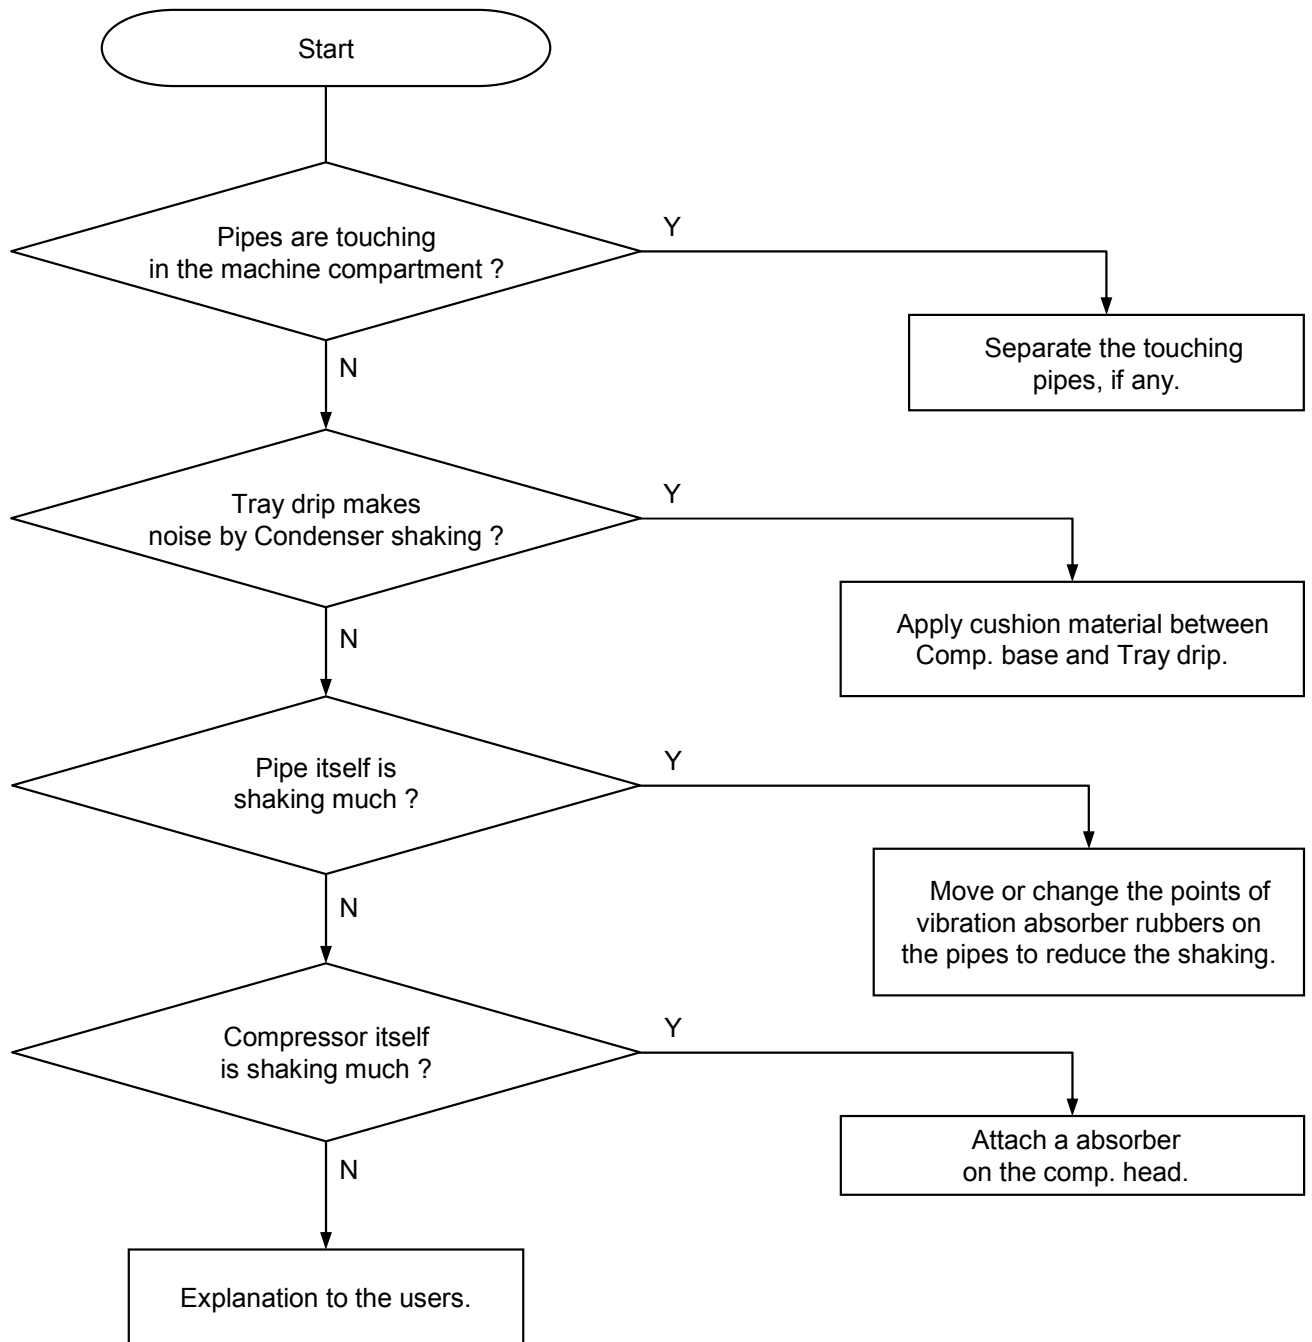

- 1) Check if fan motor frame of the assembly is fastened tightly with screws to the liner wall. Unless it is tight, vibration of shaking can make.
- 2) Check if fan motor and fan are hanged down. Fan working sound can be louder if they are not set right.

2. Any Touch Sound from Fan

- 1) Check if sealing sponge on the insulator touches the fan. If so, set it again not to touch it.
- 2) If any damage on the insulator around the fan rotation is found, set the fan motor assembly right not to touch it.

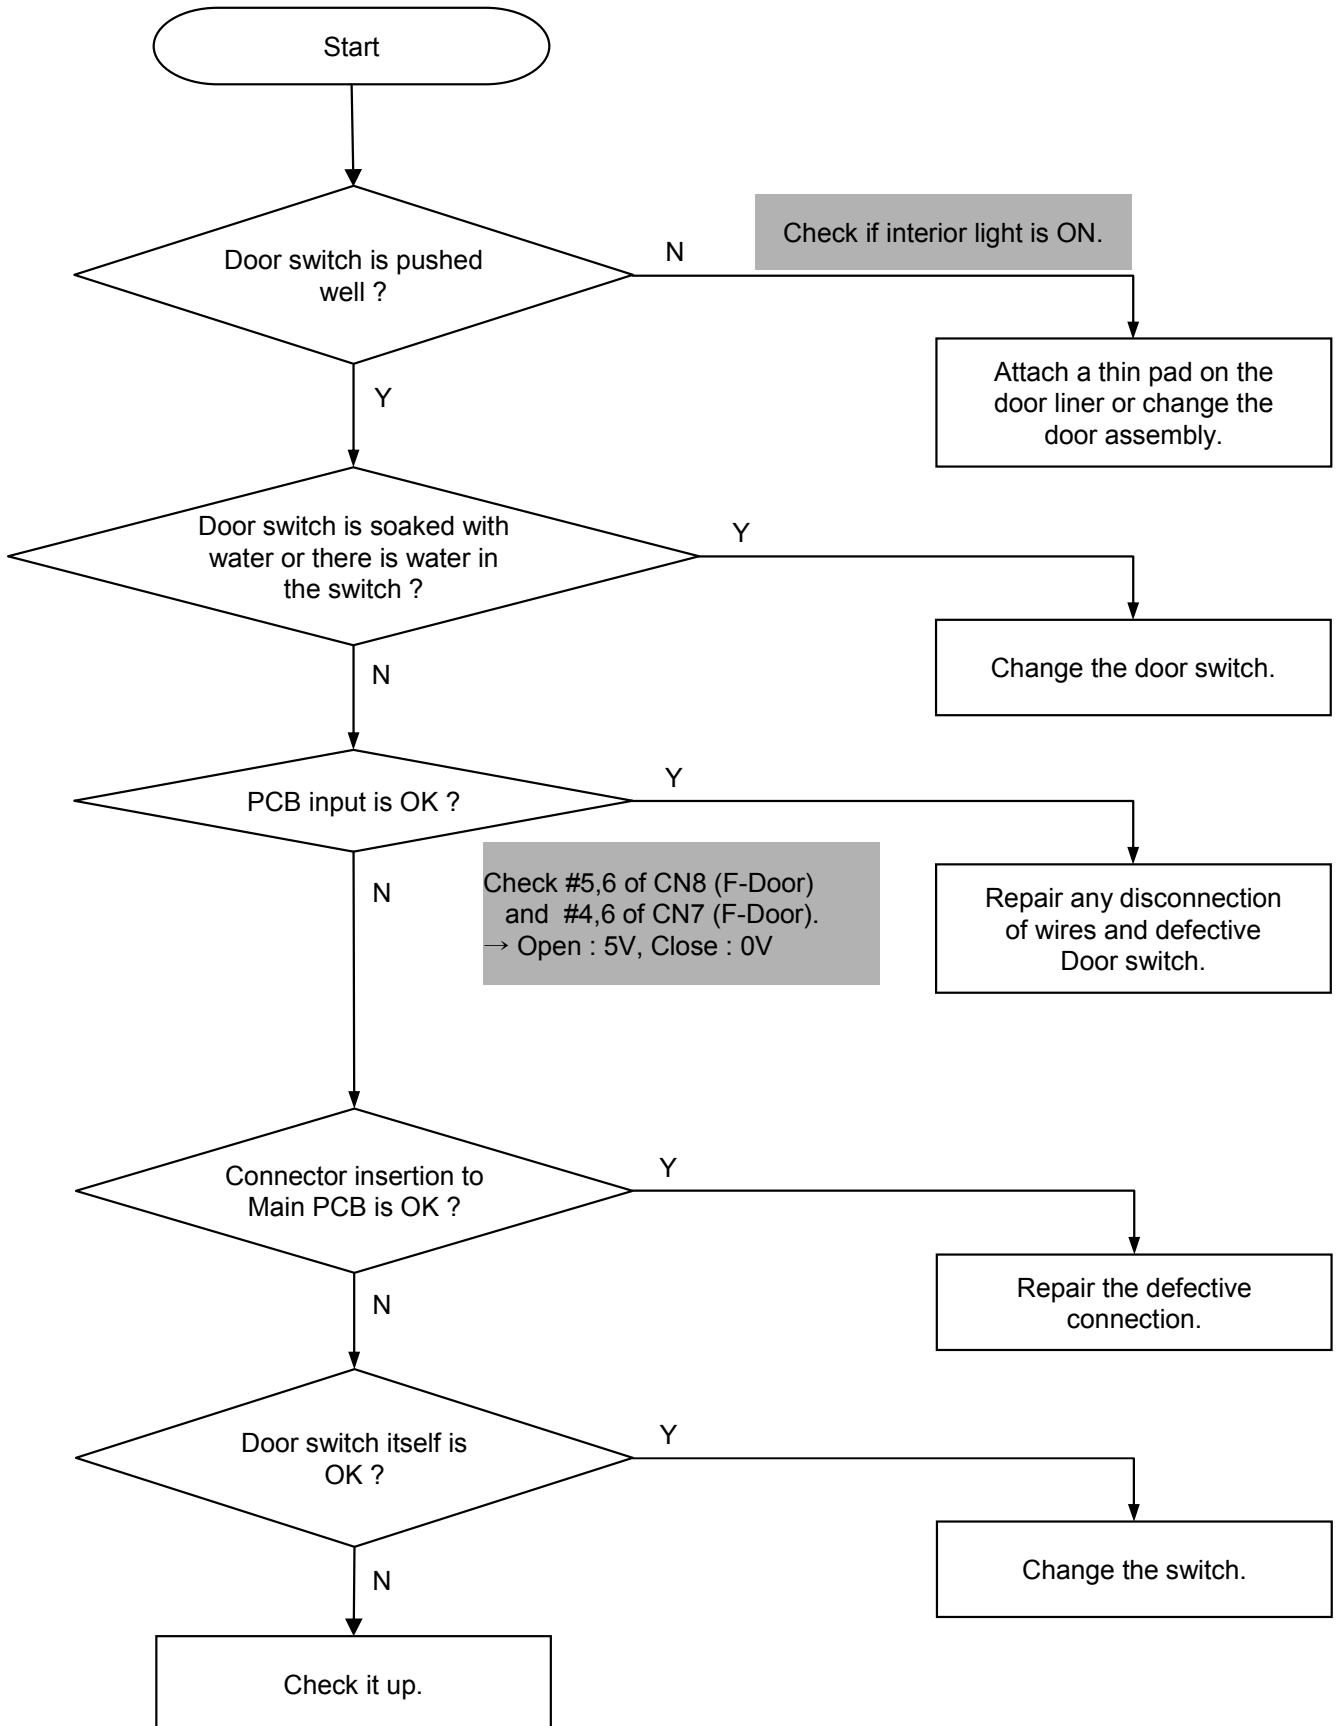

9-4-4. Pipe Noise

| Remarks |
|--|
| <ul style="list-style-type: none"> ● Refrigerant is erupting rapidly from the compressor to circulate pipes, so pipe shaking noise can make to some degree. ● In case compressor vibration is sent to a pipe directly, apply vibration absorber rubbers to welding points of the pipe and comp. or to a much bent point on the pipe. |

9-5. Door

9-5-1. Door Opening Alarm Continues though the door is closed.

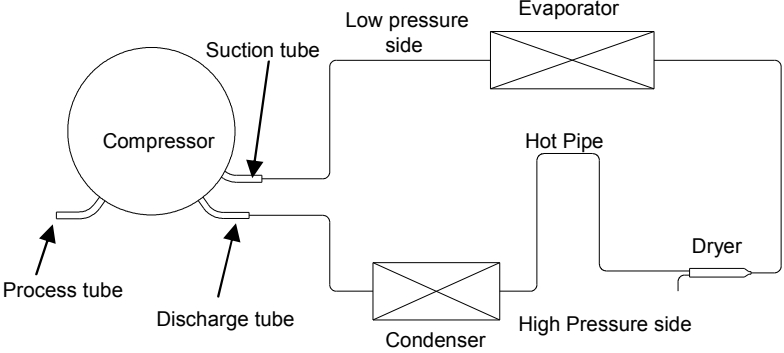

10. COOLING CYCLE HEAVY REPAIR

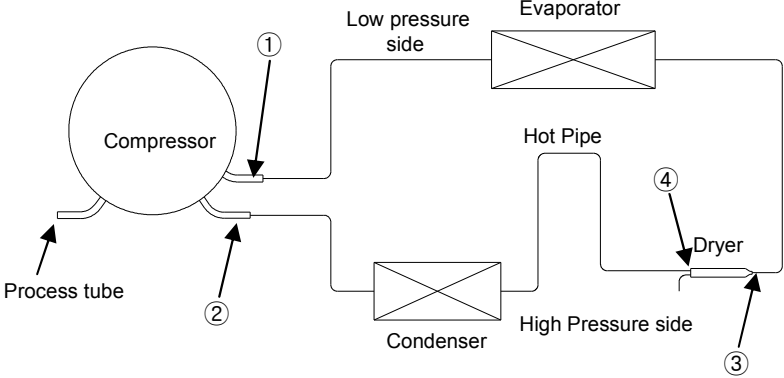

10-1. Summary of Heavy Repair

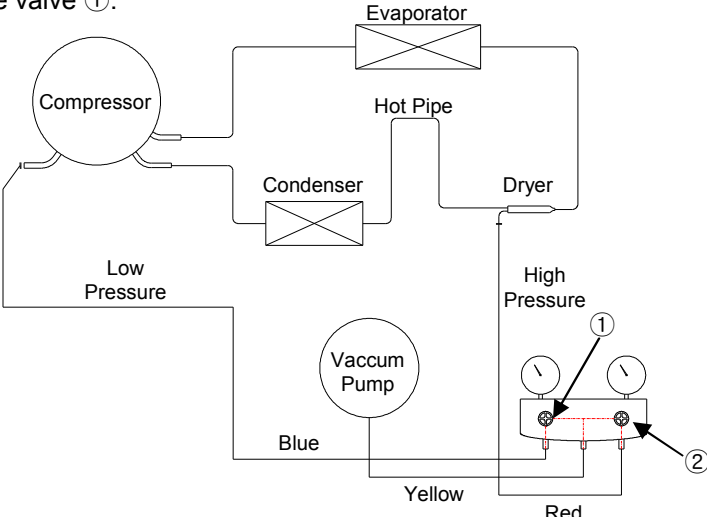

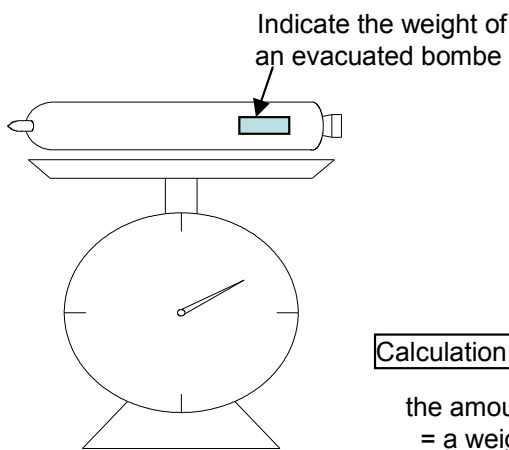

| Process | Contents | Tools |
|---|---|---|
| Remove refrigerant Residuals | * Cut charging pipe ends (Comp. & Dryer) and discharge refrigerant from drier and compressor. | * Nipper, side cutters |
| Parts replacement and welding | * Confirm refrigerant (R-134a or R-600a) and oil for compressor and drier. * Confirm N2 sealing and packing conditions before use. Use good one for welding and assembly. * Weld under nitrogen gas atmosphere. * Repair in a clean and dry place. | * Pipe Cutter, Gas welder, N2 gas |
| Vacuum | * Evacuate for more than forty minutes after connecting manifold gauge hose and vacuum pump to high (drier) and low (compressor) pressure sides. | * Vacuum pump , Manifold gauge. |
| Refrigerant charging and charging inlet welding | * Weigh and control the bombe in a vacuum conditions with electronic scales and charge through compressor inlet (Process tube). * Charge while refrigerator operates). * Weld carefully after inlet pinching. | * Bombe (mass cylinder), refrigerant manifold gauge, electronic scales, punching off flier, gas welding machine |
| Check refrigerant leak and cooling capacity | * Check leak at weld joints. Note :Do not use soapy water for check. * Check cooling capacity → Check condenser manually to see if warm. → Check hot pipe manually to see if warm. → Check frost formation on the whole surface of the evaporator. | * Electronic Leak Detector, Driver. |
| Compressor compartment and tools arrangement | * Remove flux from the silver weld joints with soft brusher wet rag. (Flux may be the cause of corrosion and leaks.) *Clean tools and store them in a clean tool box or in their place. | * Copper brush, Rag, Tool box |
| Transportation and installation | * Installation should be conducted in accordance with the standard installation procedure. (Leave space of more than 5 cm from the wall for compressor compartment cooling fan mounted model.) | |

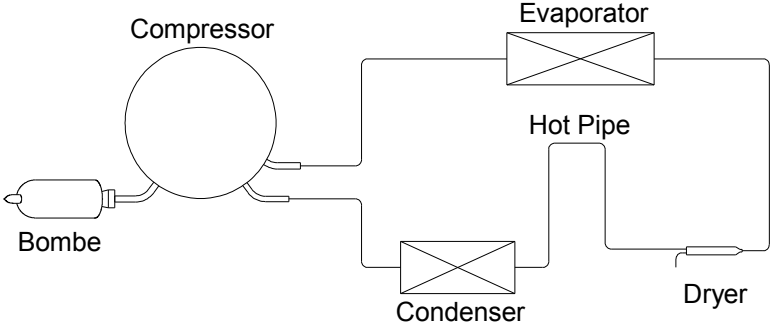

10-2. Precautions During Heavy Repair

| Items | Precautions |
|----------------------------------|---|
| Use of tools. | 1) Use special parts and tools for R-134a or R-600a |
| Removal of retained refrigerant. | <p>1) Remove retained refrigerant more than 5 minutes after turning off a refrigerator. (If not, oil will leak inside.)</p> <p>2) Remove retained refrigerant by cutting first high pressure side (drier part) with a nipper and then cut low pressure side. (If the order is not observed, oil leak will happen.)</p>  <p>The diagram illustrates a refrigeration cycle. On the left is a circular compressor with three tubes: a 'Process tube' on the left, a 'Suction tube' on top, and a 'Discharge tube' on the right. The 'Suction tube' leads to the 'Low pressure side' of the cycle, which includes an 'Evaporator' (represented by a rectangle with an 'X' inside). The 'Discharge tube' leads to the 'High Pressure side', which includes a 'Condenser' (also a rectangle with an 'X' inside). A 'Hot Pipe' connects the condenser to a 'Drier' (a small horizontal cylinder). The cycle then returns to the compressor.</p> |
| Replacement of drier. | 1) Be sure to replace drier when repairing pipes and injecting refrigerant. |
| Nitrogen blowing welding. | 1) Weld under nitrogen atmosphere in order to prevent oxidation inside a pipe. (Nitrogen pressure : 0.1~0.2 kg/cm2.) |
| Others. | <p>1) Nitrogen only should be used when cleaning inside of cycle pipes inside and sealing.</p> <p>2) Check leakage with an electronic leakage tester.</p> <p>3) Be sure to use a pipe cutter when cutting pipes.</p> <p>4) Be careful not the water let intrude into the inside of the cycle.</p> |

10-3. Practical Work for Heavy Repair

| Items | Precautions |
|--|---|
| <p>1. Removal of residual refrigerant.</p> | <p>1) Remove residual refrigerant more than 5 minutes later after turning off the refrigerator. (If not, compressor oil may leak inside.) 2) Remove retained refrigerant slowly by cutting first high pressure side (drier part) with a nipper and then cut low pressure side.</p>  |
| <p>2. Nitrogen blowing welding.</p> |  <p>* When replacing a drier: Weld ① and ② parts by blowing nitrogen (0.1~0.2kg/cm²) to high pressure side after assembling a drier.</p> <p>* When replacing a compressor: Weld ③ and ④ parts by blowing nitrogen to the low pressure side. Note) For other parts, nitrogen blowing is not necessary because it does not produce oxidized scales inside pipe because of its short welding time.</p> <p>※ KEYPOINTING Welding without nitrogen blowing produces oxidized scales inside a pipe, Which affect on performance and reliability of a product.</p> |

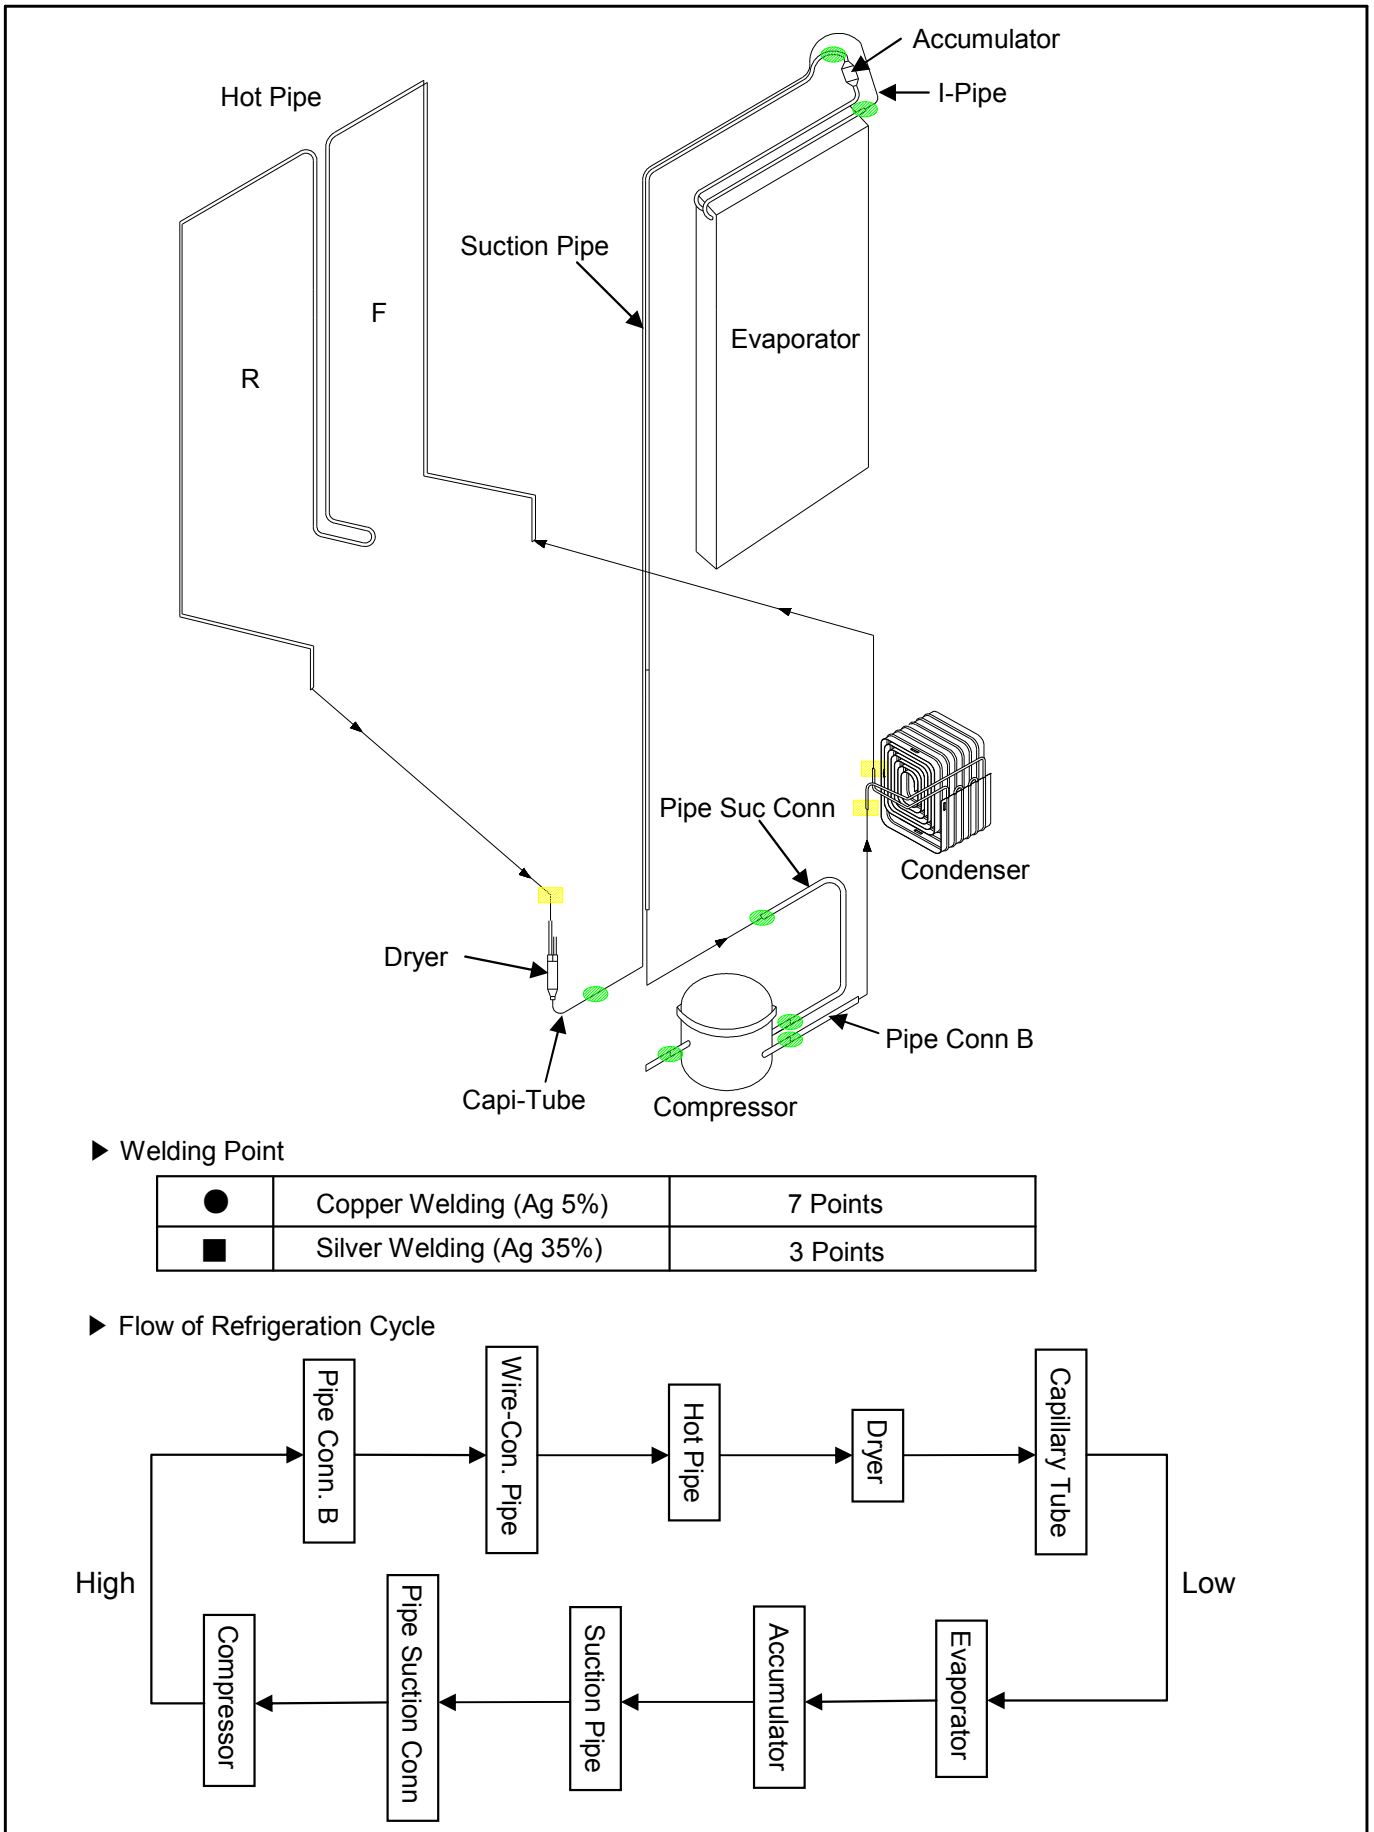

| Items | Precautions |
|--------------------------------|---|
| <p>3.Vacuum degassing.</p> | <p>* Pipe Connection Connect a red hose to the high pressure side and a blue hose to the low pressure side.</p> <p>* Vacuum Sequence Open ①,② valves and evacuate for 40 minutes. Close valve ①.</p>  <p>※ KEYPOINTING</p> <ol style="list-style-type: none"> 1) If power is applied during vacuum degassing, vacuum degassing shall be more effective. 2) Operate compressor while charging refrigerant. (It is easier and more certain to do like this.) |
| <p>4.Refrigerant charging.</p> | <p>* Charging sequence</p> <ol style="list-style-type: none"> 1) Check the amount of refrigerant supplied to each model after completing vacuum degassing. 2) Evacuate bombe with a vacuum pump. 3) Measure the amount of refrigerant charged. <ul style="list-style-type: none"> - Measure the weight of an evacuated bombe with an electronic scale. - Charge refrigerant into a bombe and measure the weight. Calculate the weight of refrigerant charged into the bombe by subtracting the weight of an evacuated bombe.  <p>※ KEYPOINTING</p> <ol style="list-style-type: none"> 1) Be sure to charge the refrigerant at around 25°C. 2) Be sure to keep -5g in the winter and +5g in summer. <p>Calculation of amount of refrigerant charged</p> <p>the amount of refrigerant charged = a weight after charging - a weight before charging (a weight of an evacuated cylinder)</p> |

| Items | Precautions |
|-----------------------------------|--|
| 4.Refrigerant charging. | <p>4) Refrigerant Charging Charge refrigerant while operating a compressor as shown above. 5) Pinch a charging pipe with a pinch-off plier after completion of charging. 6) Braze the end of a pinched charging pipe with copper brazer and take a gas leakage test on the welded parts.</p>  |
| 5. Gas-leakage test | * Take a leakage test on the welded or suspicious area with an electronic leakage tester. |
| 6. Pipe arrangement in each cycle | * Check each pipe is placed in its original place before closing a cover back-M/C after completion of work. |

10-4. Standard Regulations for Heavy Repair

| |
|---|
| <ol style="list-style-type: none"> 1) Observe the safety precautions for gas handling. 2) Use JIG (or wet towel) in order to prevent electric wires from burning during welding. (In order to prevent insulation break and accident.) 3) The inner case shall be melted and insulation material (polyurethane) shall be burnt if not cared during welding inner case parts. 4) The copper pipe shall be oxidized by overheating if not cared during welding. 5) Not allow the aluminum pipes to contact to copper pipes. (In order to prevent corrosion.) 6) Make sure that the inner diameter should not be distorted while cutting a capillary tube. 7) Be sure that a suction pipe and a filling tube should not be substituted each other during welding. (High efficiency pump.) |
|---|

10-5. Brazing Reference Drawings.

11. INSTALLATION GUIDE

11-1. Installation Preparation

Check if the refrigerator can pass a doorway or enter a door first.

| | |
|-------------------------------------|--------------------------|
| Dimensions(including Door Handles) | |
| (Width*Depth*Height) | 903mm X 734.5mm X 1790mm |

Find a suitable place to install

Sufficient space from refrigerator back to the
* wall for free air ventilation

* Avoid direct sunlight.

Once the installation place is ready follow the installation instructions.
If surround temperature of refrigerator is low (below 10°C)),
foods can be frozen or the refrigerator can work in abnormal way.

11-2. If the refrigerator can not enter the door

Removing Freezer Door

※ Remove front bottom cover first, if it is attached.

| | | |
|---|---|---|
| <p>1 Remove front bottom cover first, Pull out the left collar of the coupling first, then hold the coupling and pull out the left water tube.</p>  | <p>2 Unscrew top hinge cover with a screw driver. Remove the hinge cover.</p>  | <p>3 Turn top hinge bolt counterclockwise. Disconnect the harness wires.</p>  |
| <p>4 Lift up the front of hinge to remove. (After the hinge is removed the door can fall down forward. Be careful !)</p>  | <p>5 Be careful not to damage the water line when removing the door.</p>  | |

Removing Refrigerator Door

| | | |
|--|---|---|
| <p>1 Unscrew top hinge cover with a screw driver. Remove the hinge cover.</p>  | <p>2 Turn top hinge fastener counterclockwise. Disconnect harness wires.</p>  | <p>3 Lift up the front of hinge to remove. (After the hinge is removed the door can fall down forward. Be careful !)</p>  |
| <p>4 Lift the door straight up to remove.</p>  | | |

Replacing Freezer Door

- 1** Insert the water tube into the hole of the bottom hinge pin first, then insert the bottom of freezer door into the bottom hinge pin.

- 2** Insert the bottom hole of freezer door straight to the bottom hinge pin.

- 3** Let the top of door close to the cabinet and insert the top hinge pin to the top hole of freezer door. (Insert the back of hinge to the groove of protrusion first, then front to the top hole of door.)

- 4** Turn the hinge fastener tightly to the end. Connect harness wire and screw ground wire.

- 5** Insert the water tube far into the coupling.

Replacing Refrigerator Door

- 1** Insert the bottom hole of refrigerator door straight to the bottom hinge pin.

- 2** Let the top of door close to the cabinet and insert the top hinge pin to the top hole of refrigerator door. (Insert the back of hinge to the groove of protrusion first, then front to the top hole of door.)

- 3** Turn the hinge fastener tightly to the end. Connect harness wirings and screw ground wire. Click and screw the top hinge cover.

11-3. Refrigerator Leveling & Door Adjustment

※ Refrigerator must be level in order to maintain optimal performance and desirable front appearance.
(If the floor beneath the refrigerator is uneven, freezer and refrigerator doors look unbalanced.)

In case freezer door is lower than refrigerator door

Insert a screw driver (flat tip) into a groove of the left wheel (bottom of freezer) and turn it clockwise until the door is balanced.
(clockwise to raise freezer door ;
counterclockwise to lower)

In case refrigerator door is lower than freezer door

Insert a screw driver (flat tip) into a groove of the right wheel (bottom of refrigerator) and turn it clockwise until the door is balanced.
(clockwise to raise refrigerator door ;
counterclockwise to lower)

Caution

The front of refrigerator needs to be higher just a little than the back for easy door closing, but if the wheel is raised too much for door balance, i.e. front of refrigerator is too higher than the back, it can be difficult to open the door.

11-4. Water Line Installation

How to install Water Line

1. The water pressure should be 3kgf/cm² or more to run the automatic icemaker.
 - ※ Checkup your tap water pressure ; if a cup of 180cc is full within 10 seconds, the pressure is OK.
2. When installing the water tubes, ensure they are not close to Any hot surface.
3. The water filter only "filters" water ; it does not eliminate any bacteria or microbes.
4. If the water pressure is not so high to run the icemaker, call the local plumber to get an additional water pressure pump.
5. The filter life depends on the amount of use. We recommend you replace the filter at least once every 6months.
 - ※ When attaching the filter, place it for easy access (removing & replacing)
6. After installation of refrigerator and water line system, select [WATER] on your control panel and press it for 2~3 minutes to supply water into the water tank and dispense water.
7. Use sealing tape to every connection of pipes/tubes to ensure there is no water leak.
8. The water tube should be connected to the cold water line.

WATER SUPPLY KIT

- ※ Check the parts below for installing water supply. Some other necessary parts are available at your local service agents.

Installation Procedure

1. Join connector to water tap

- 1) First lock the main tap water valve.
 - Check if connector B and C has its own rubber packing ring in it.
- 2) Join Connector C to the water tap, then Connector B to connector C with a wrench or spanner.
- 3) Insert water pipe into Connector-B and join Connector-A with a wrench or spanner.
- 4) In case Connector-C does not fit water tap join Connector-B directly to the tap. (See Figure B.)
 - ※ If no connector fits water tap, call your local service.
- 5) Unlock main tap water valve, open tap water and check if any water leaks on each joins.

Place the rubber washer inside the tap connector and screw onto the water tap.

2. Get ready to install water line

- 1) Measure an approximate distance between the filter and the Water Tube and cut the tube off filter vertically.
- 2) Connect the tubes to the filter as the figure shows.

Leave a sufficient distance when cutting the tubes.

3. Remove any substance from filter

- 1) Open the main tap water valve and check if water comes out of the Water Tube.
- 2) Check if the Water Valve is open in case water does not come out.
- 3) Leave the valve open until clean water is coming out.
※ Initial water may contain some substances out of filter (manufacturing process).

4. Attach the filter box

- 1) Screw and fasten the filter holder to the left/right side of the back of refrigerator.
※ In case the holder is not fastened well, remove the back paper of the tape on the filter holder and attach it.
- 2) Insert the filter box into the holder.

5. Connect water tube

- 1) Remove the rear cover at the bottom back of the refrigerator.
- 2) Insert the fastening ring into the Water tube.
(Be careful to follow the direction of the nut.)
- 3) Insert the Water Tube into the top of Water Valve, turn the nut clockwise to fasten it. (The Water valve is to the right of the motor.)
- 4) Check for any bent tubes or water leaks; if so, re-check installation procedure.
- 5) Replace the rear cover. (The Water Tube should be placed between the groove of the refrigerator back and motor cover.)

Set the tube upright as the figure shows.

6. Fasten water tube

- 1) Fasten the Water Tube with the [Fastener A].
- 2) Check if the tube is bent or squeezed. If so, set it right to prevent any water leak.

7. After installation

- 1) Plug the refrigerator, press the [WATER] button on the control panel for 2~3 minutes to remove any air (bubble) in the pipes and drain out the initial water.
- 2) Check the water leak again through the water supply system (tubes, connectors and pipes) Rearrange the tubes again and do not move the refrigerator.

11-5. Dispenser Water Flow
